PREFACE

In the process of economic development of a mixed economy like India, the co-operation between Government as well as private sector is highly essential. Without such cooperation sound-tase can not be provided for the rapid growth of country, the central government as well state Government has been established a large number of public enterprises in the country. The main objective behind promoting large number of these enterprises has been mainly to gain control or the commanding hights of the economy.

The state government of U.P. took the lead and has so far inverted about se. 663074 lacs in about 61 operating purlic enterprises. Today these enterprises cover a vast and varied range of activities. The UFSKCC is the second biggest in terms or employment and fifth in tuins of investment.

I have always been coleful to make as displasionate and detailed study as could be possible in the circumstances. In this study I have depend upon the information compiled with the help of various annual reports and relevent documentary of UradC. An humble attempt has been made to enalyse the financial growth of UradC covering its investment petterms, working performance and employment structure. For the purpose the study has been divided into 7 chapters. The list chailer is covering meaning, scope

and importance of financial management, second chapter covers growth of public interprises in the state, third covers growth of UPSKTC. An attempts has been made about longterms as well as shorterms financial management in UPSKTC. A critical study of financial apprails in UPSKTC has been also discussed in the last chapter.

In this project, rirstly, I am indebted to my parents must who have encouraged me constantly to undertake the research work. I have undicated my thesis to them.

- I, whole headily express my sincre feeling of gratitudes regards and thankfulness to my Guru Ji and guide Prof (Dr.) Jegdish Frasad Under whose guidance and supervision, it has been porable for me in getting this operators work completed.
- I do not find to express my gratitude and indepthess to EX-Prof. S.M. Asthana, EX-Prof. J.S. Mathur and Prof. G.C. Agrawal, head faculty of Commorce and Buciness Administration University of Allahabad.
- I am also grateful to Shri Chandra Prakash Astt.

 Librarian university of Allahabad who provided me all

 valuable information and relevent materials on the subject.
- In this project I am also indebted to the managing Director, and Regional managers of Various Theyofts of UPSRNC.

I express my Sincer feeling of practicules, regards to Shri R.M. Diwedi Ex-Principal of B.B.D.P.G. College Paruiya Ashram, Peizabad. His love and effection have always bern a source of inspiration to me.

Ny special thanks are duw to my youngur brothers kr. A. Nurti, J.T.O. Deptt. of Tele, reph Nr. S. Fujon, N.Com, and kr. Radhey Shyam N.Sc. (Frevious), Allohab.d University, who showed special interest in the work.

In the end I shall be failing in my duty if I do not express my thankfulness to Shri Ram Raj Pandey who typed manuscript so neatly and timely,

Deptt of Com. & Business Administration University of Allahabad.

CHAPTER I

INTRODUCTION

CHAPTER I

Introduction-

Financial Management is concerned with the managerial activities pertaining to the procurement and utilisation of funds for business purpose. In the words of Charles L. Patther, "The finance activity involves acquiring and administering the funds of the firms." ¹ Thus, it involves the operational activity of a business enterprise that is responsible for obtaining and utilising the funds required for its efficient operations,

Undoubtedly, finance is the life blood of business. Financial management may be rightly termed as the science of money. We need finance for the production of goods and services as well as their distributions. The efficiency of production and marketing operations is directly influenced by the manner in which the finance function of the enterprise is performed by the finance personel. The ambitious plans of a businessman would remain mere dreams unless adequate money is available to convert them into reality. In the early ages of industrial development capital was not of much significant and financial requirements of business were limited. The method of production was extremely simple and the tools and equipments used were quite crude and inexpensive. Labour was more important than capital. Production could be termed as labour intensive. Under such a set-up, finance

Charles L. Parther, Financing Business Firms, Irwin, Homewood, Illions, 1966, Page 4

fid not pose any big or serious problem. As industry grew and the method of production became increasingly complex and the machines, tools and equipment became more expensive and the financial requirements of industries also grew. The industrial revolution changed the very nature and complex of industry. Production began to be carried on a mass scale for national and international markets. This necessitated the use of huge and complex machinary and very large quantities of raw materials. Manufacturing operations had to be conducted in hig factories. All these development made industry capital intensive and capital became one of the most immortant factor of production.

In modern age, there are three important activities of the business firm - finance, production and marketing. Finance is taken to be the most important factor of all the three. The changing facets of finance can be analysed by dividing the entire process into three broad concept. It starts from the early part of the present century wherein finance is regarded as just cash only. In other words, this approach just emphasises only on the liquidity and financing of the enterprise. It is believed that since nearly every business? transaction involves cash, directly or indirectly, finance is concerned with every thing that takes place in the conduct of the business. But, it is important to note that the meaning of term 'Business' g used here, is too broad to be meaningful.

In the second step of evolution, the traditional approach became prevalent. It is concerned with raising of funds used in an enterprise, and covers (1) instrument, institutions and practices through which funds are maised

Ezra Soloman, The Theory of Financial Management New Yark, Columbia University Press, 1963 Chapter 1- Page.3.

fid not pose any hig or serious problem. As industry grew and the method of production become increasingly complex and the mechines, tools and equipment became more expensive and the financial requirements of industries also grew. The industrial revolution changed the very nature and complex of industry. Production began to be carried on a mass scale for national and international markets. This necessitated the use of huge and complex mechinary and very large quantities of raw materials. Manufacturing operations had to be conducted in hig factories. All these development made industry capital intensive and capital became one of the most important factor of production.

In modern ace, there are three important activities of the business firm - finance, production and marketing. Finance is taken to be the most important factor of ell the three. The changing facets of finance can be analyzed by dividing the entire process into three broad concept. It starts from the early part of the present century wherein finance is regarded as just cash only. In other words, this approach just emphasises only on the liquidity and financing of the enterprise. It is believed that since nearly every business' transaction involves cash, directly or indirectly, finance is concerned with every thing that takes place in the conduct of the business. But, it is important to note that the meaning of term 'Business' ga used here, is too broad to be meaningful.

In the second step of evolution, the traditional approach became prevalent. It is concerned with raising of funds used in an enterprise, and covers (1) instrument, institutions and practices through which funds are maised

Ezra Soloman, The Theory of Financial Management New York, Columbia University Press, 1963 Chapter 1- Page.3.

and (ii) the legal and accounting relationship between the company and its sources of funds including the redistribution of income and assets among these resources.

This concept of finance is broader than the first one. Although the problem of financing business enterprises during the 1940 g and early 1950 g was dominated by this traditional approach, it could not last for a longer period because this approach totally ignored the function of an efficient employment of resources.

The modern approach of finance involves an Integrated Approach' to finance. According to it, finance is concerned not only with the raising of funds but their administration also. This approach to finance is thus concerned with (a) determining the total amount of funds to exploy in the firm (b) allocating these funds efficiently to various assets and (c) obtaining the best mix of financing i.e. the type and amount of corporate sacutities!

The traditional approach outlived its utility, in the changed business situation since the mid 1950, because of its emphasis on the episodic financing and lacking in 'sound theoretical underpinnings'. Various economic and environment factors have the most the approach to, and the scope of, financial management. The emphasis has shifted from episodic financing to the managerial financial problems, from raising of thous to efficient and

Ezra Soloman, The Theory of financial Management, New Yark, Columbia University Press 1963, Chapter 1, Page-22.

effective use of funds. The modern approach embodied with sound analytical theory.

Function of Firencial Management-

According to Herbert G.Hicks and C.Ray Gullett-

"The Manager of finance activity is the guardian of the firm's money." Ol. To prove himself as an efficient guardian, the finance manager of a modern business enterprise has to deal with four management functions in finance viz. (i) Planning (2) Organizing (3) directing and (4) controlling the financial activities of an enterprise. All these are analysed as under-

1. Planning: Planning the financial activities involves whetfag up of objectives and targets that an enterprise seeks to achieve within a certain period of time. In other words, it involves three important aspects, viz., (i) setting up of objectives, (ii) methods of implementation of the various plans for the purpose of realising the objectives set-out; and (iii) making necessary adjustments and integration.

Financial planning is a very systematic job which only an experienced financial manager can perform most efficiently. He has not only to estimate the fixed as well as the working capital requirements but also formulate the capital structure

Herbert G.Hicks, C.Ray Gullett. Modern business management McGraw-Hill Kogakusha, Ltd. Tokyo, 1974, Page-258.

to determine the various types of securities and their relative proportion whereby the total capital is to be obtained. Besides, he should also plan the actual procurement of fixed and working capital supply but also the actual uses for which the capital so procured should be put.

2. Organising function-

The organising function of management is concerned with coordination of the responsibility for various operational areas in the financial set-up so that specific results are expected from different action points. The financial manager should fix up responsibilities of various experts with maximum care.

3.Directing function-

The various objectives indicated by the planners in the chart under the financial planning function should be properly communicated by the financial manager to all other section Heads engaged in the financial division so as to make them understand what they are expected to do and how.

4. Control-

The control function of financing focusses on knowing and judging performance in various ways. The three major aspects of this function are:

(1) knowing performance actuals; (11) judging performance against standard targets etc; and (111) taking necessary corrective action which in turn involves removal of snags as well as revision of targets.

The controlling function can be undertaken by taking objectives and targets as norms against which actual performance is observed for determining the variances , if any; which may be both favourable and unfavourable. From the stand point of the management excessive favourable variance is as bad as excessive unfavourable variance. This is because wide variance indicates, the failure of financial management. Based on the nature of these variances, corrective action should be taken both in the financial division as well as in other operational areas. Financial management is a day-today operational system of managing the funds of the enterprise in such a way that would give the best results in the given circumstances. Since almost all kinds of business activities directly or indirectly involves acquisition and utilisation of funds, an inseparable relationship exists between the finance function on one hand and production, mkarketing and other functions on the other. Despite this we can broadly identify two kinds of finance function, - fiz. -

- Managerial Finance Punction, which requires skilful planning, organising, control and execution of financial activities as explained in the preceding paragraphs.
- (2). <u>Soutise finance function</u> which do not require a great managerial ability to carry them out. Generally they just involve clerical functions as they are incidental to the effective handling of the managerial finance functions.

The routine finance functions will have to be

performed in order to effectively execute the managerial finance functions. The important routine finance functions are:

- Supervising cash receipts and payments and safeguarding cash balances,
- (ii). Safe-keeping of securities and other valu ble documents like insurance policies, etc;
- (iii). Procuring and preserving mechanical details of fresh outside financing, if any,
 - (iv). Record keeping and reporting.

According to Exra Soloman, "the function of fina roial management is to review and control decisions to commit or recommit funds to new or ongoing uses. Thus, in addition to raising funds, financial menagement is directly concerned with production, marketing and other functions within an enterprise whenever decisions are made about the acquisition or distribution of assets." O

^{01.} Soloman, Ezra, The Theory of financial Management, Columbia University Press 1969, Page 3.

Objectives of Financial Management.

It is generally agreed that the financial management objective of the firm should be the maximisation of owners' economic welfare. However, there is disagreement as to how the economic welfare of owners can be maximised. Two well known and widely discussed criteria are put forth for this purpose are-

(A) Profit maximisation (B) Wealth maximisation.

(A). Profit Maximisation:

Profit maximisation means maximising the rupee income of the firm. Traditionally, the business has been considered as an economic institution. As such, it has developed a common measurement of efficiency, viz, profit-It is, therefore, possible to assume profit maximisation as a natural business objective.

But the critics of profit maximisation as an objective of financial management argue that profit maximisation is a consequence of perfect competition and that in face of imperfect modern markets today, it can not be a legitimate objective of the business enterprise. As Antony, Robert remarks, ⁰¹ in this changed business structure which is now chracterised by limited liability and a divorce between management and ownership, i.e., holders of equity shares and creditors. The owner-manager of the 19th century has been replaced by professional manager who has to reconcile the conflicting objectives of

^{01.} Antony Robert, N., The Trouble with profit maximisation
Harvard Susiness Review, (Nov-Dec.1960) pp.126-34

of all parties connected with the business unit, viz., creditors customers, employees, government etc. As such, profit maximisation, in this new business environment looks unrealistic, difficult and immoral.

Besides this, as Soloman opines, profit maximisation has been rejected as an operational criterion for maximising the owner's economic welfare as it can not help in ranking alternative courses of action in terms of their economic efficie-ncy. This is because it is vaque, it ignores the timing of returns and it ignores risk,

(B) Wealth Maximisation

Wealth maximisation, as an objective of financial management is now regarded as an appropriate and operationally feasible criterion. This is because, it provides an unambiguous measure of what financial management should seek to maximise in making investment and financial factions. 20

Wealth maximisation means maximising the net present value of a course of action. The net present value of a course of action is the difference between the gross present value of the benefits of that action and the smount of investment required to achieve those benefits. The gross present value of a course of action is found out by dicounting or capitalising its uenefits at a rate which reflects their timing and uncertainty. A financial action which has positive net present value creates wealth and, therefore, is desirable. A financial action resulting in

^{01.} Soloman, Ezra, The Theory of Financial Management, Columbia University Press, 1969, Page-19

^{02.} Ibid, p.22.

negative not present value should be rejected.

The rationale in using wealth maximisation concept as an operating financial management policy, can be summed up from different stand points as follow:

(1). The interest of the supliers of Loan Capital-

Short Term and Long term supliers of loan capital are totally safeguarded by the wealth maximisation objective. This is because, if a company pursues the policy of maximisting the wealth of share-holders who are legally eligible to get their share only from belance of the earnings that remains after settling the due of the supliers of loan capital, there is no risk to such suppliers of loan capital. They are legally entitled to a fixed rate of interest on their capital, besides enjoying a prior claim on the earnings.

(2). Employees-

Employees' interest are also protected by the corporate policy of wealth maximisation. It is, of course, true that the trade unions should, through their bargaining process, achieve a fair share in the wealth that is maximised to all the employees of the company.

(3). The Management's Interest-

Although certain situations, causing conflict between the shere holders and monsgements go_els, were to emerge on certain occasions, the management can survive in the company for a considerable length of time only when it accepts the objective of wealth maximisation as a guiding rule, and take precautions to ensure that its actions are always

governed by it. When once it accepts wealth maximisation as a normative guide, it can also keep the shareholders of the company happy.

(4). Society-

Acceptance of the wealth maximisation objective by any firm, will also benefit the society. There are many social responsibility of a firm, such as the supply of quality products at low prices to the customers, maintaining cordial industrial relations, etc. which are only possible by the wealth maximisation.

Bes.d on the foregoing discussion, we can easily say, maximisation of wealth should be required as operting objective by which financial decisions are to be guided.

Financial Management of Public Enterprises

Public enterprises play a significant role in the economic growth. The performance of these enterprises is held under critical observation by the various segments of the society. The critical observation has two aspects, on the one hand there is a comparision between the performance of enterprises in public and private sector and, on the other, those enterprises are subjected to test on the basis of the return on the huge public investment in the public sector.

In a capital scare economy like India, the allocation of investment in the public sector obviously to be viewed with great concern because the socio-economic objectives of the state do not only aim at raising the standard of living of the masses but also generating adequate capital to be invested in the economy. This obviously directs our attention to the need of an efficient management of public enterprises, Efficient fina mind lamagement has contributed significantly not only to profitability but also to the creation of a balance between the procurement and the utilisation of funds. Hence, the need for better financial management in public enterprises has been felt perticularly in the light of revised policy.

The management of public enterprises, like any other enterprise, has to pay utmost attention to the effective management of all resources including the finance available to them.

Public enterprises, basically are the commercial organisations and so finance becomes the key factor for all activities. Finance is the source and at the same time constraint in decision making process.Finance It involves two important functions, viz, (a) Reising funds necessary to initiate a new activity and (b) It provides the basis of continued operation.

In public enterprises as well as in other organisation, finance may be of three types i.e.,

(i) Long term (ii) Medium term and (iii) Short-term.

Long term and medium term finance constitutes the following:

- (a) Public equity shares and bonds,
- (b) Loans from banking and financial institutions,
- (c) Debentures.

Funds for the acquisition of productive assets are obtained either internally or externally or by a combination of both. Internal sources of funds can be generated by retained earnings and depreciations.

The major part of external finance of the public enterprises is provided by the government in the form of equity capital and loans. The long-term finance is also procured from the financial institutions such as Industrial Finance Corp. of Indis, Industrial development Bank of India, Life Insu ance Corporation of India for their expansion programme. Because of the rigid conditions imposed on borrowing from specialised institution, they constitute a very significant part of total loans raised by public enterprises.

An important area of management of funds of the public enterprises is extended to the surpluses retained within the enterprise. On the one hand it is felt that a higher rate of retention of surpluses is advantageous to the public enterprises because of (a) Quick availability of funds for expansion and comparative case in obtaining government's sanction for a project finance by internally generated resources. (b) Freedom enjoyed by enterprise to reinvest its surpluses subject to, no doubt, national priorities. (c) Elimination of necessity of obtaining government's sanction in case of minor decision or replacement modification or manginal expansion. (6) Protection of the image regarding the macro as well as micro efficiency of the public enterprises.

On the other hand, the retention of surpluses of public enterprises can distart the optimum allocation of resources. However, ef:ective and trained financial' manager is very much needed for raising internal funds or strengthing government resources with surpluses of public enterprises. generated by retained earnings and depreciations.

The major part of external finance of the public enterprises is provided by the government in the form of equity capital and loans. The long-term finance is also procured from the financial institutions such as Industrial Finance Corp. of India, Industrial development Bank of India, Life Insu ance Corporation of India for their expansion programme. Because of the rigid conditions imposed on borrowing from specialised institution, they constitute a very significant part of total loans raised by public enterprises.

An important area of management of funds of the public enterprises is extended to the surpluses retained within the enterprise. On the one hand it is felt that a higher rate of retention of surpluses is advantageous to the public enterprises because of (a) Quick availability of funds for expansion and comparative case in obtaining government's sanction for a project finance by internally generated resources, (b) Freedom enjoyed by enterprise to reinvest its surpluses subject to, no doubt, national priorities. (c) Elimination of necessity of obtaining government's sanction in case of minor decision or replacement modification or marginal expansion. (d) Protection of the image regarding the macro as well as micro efficiency of the public enterprises.

On the other hand, the retention of surpluses of public entorprises can distart the optimum allocation of resources. However, ef:ective and trained financial ' manager is very much needed for raising internal funds or strengthing government resources with surpluses of public enterprises. should we have trained financial managers for different type of public enterprises or should we have general cadre of financial manager? The latter seems to be a better proposition. It is, therefore, essential to establish a proper institutional frame work for providing facilities for training financial managers of different levels. Before posting any financial manager in public enterprises, it should be ensured that undergoes on orientation in financial management for the specific type of the concerned public sector unit.

In an economy like India which is being progressively socialised the entire fiscal structure has to be built on the stray foundation of profitable public enterprises. Deficiencies in the organisation of financial management function ultimately reflects on profitability in view of the absence of requisite sensitivities in different directions. "If the public undertakings are to function on business and commercial principles it is imperative that their administrative and financial procedures are consistent with their requirement. However, these undertakings have largely copied the bureaucratic procedures obtaining in the Government departments. Mejority of them have yet to set up adequate finance and accounts organisations. The auditors have repeatedly pointed out the inadequacy of financial control and internal audit system. " 01.

^{01.} Administrative Reforms Commission, Report on Public Sector Enterprises October 1967, Page 56.

The Financial Organisation of the Public enterprises may be divided into different departments/sections as follows:

- (1). Accounting,
- (2) Budgeting.
- (3). Internal Audit
- (4). Cost Control
 (5). Balance sheet and Proofit and Loss.
- (6). Statutary Audit.

(1). Accounting:

The maintemace of cash book and accounts, payment of bills, preparation of profit and loss accounts etc., are also the responsibility of the finance division of the public undertaking with the director finance and its head. Accounting duties may be classified into (a) Cash accounts (b) Store—accounts (c) Establishment accounts and (d) Commercial accounts. All such accounts are properly worked into by suitable officers.

The accounting system is the major qu ntitative information system in almost every organisation, at the same time it provides an effective tool of financial control. It should provide information for three purposes, viz.,

- Internal reporting for managers for use in controlling routine operations,
- (ii)Internal reportinf for managers for use in making non-routine decisions
- (iii).External reporting to stock holders, government and other outside parties.

(2). Budgeting-

The budget of a company is its financial blue-print

for a specified normally 12 months. It is one of the chief instruments of firencial control as well as authorisation where by the administration is enabled to carry out its polices and programmes. It has been suggested by the Administrative Reforma Commassion that the public undertakings should prepare a comprehensive budget to embrace the entire organisation. The budget of a public enterprise has also to meet the requirement of accountability. The Estimates Committee in its report on Budgetary Reforms has recommended that industrial undertakings should prepare a performance and programme statement for the budget year and that this statement should be made available to parliament along with the previous year's statement at the time of the presentation of annual budget.

The burget, at present, is used mainly for defining of physical targets against which actual results are compared at the end of the year. Budget should be looked upon merely as an instrument that provides the basis for obtaining funds or as an instrument of control over those who are authorised to spend.

"The budgeting system should provide for a regular system of financial and work plans for approval, execution, reporting and the evaluation of scheme and projects. Towards that end, an adequate system of reporting and evaluation has to be developed to support performance budgeting.* O1.

^{01.} A.R.C.Report of the study team on financial management. May, 1967, Page 184.

(3). Internal Audit-

Internal audit is another important veapon of financial control. It is managerial control and its objective is to provide assistance in discharging the managerial functions. It differs from the audit conducted by the Compttoller and Auditor Genoral as the objective of the latter is to examine the propriety of the financial transaction. In a large industrial enterprise, the scope of control and supervision that can be exercised by the Supervising Officers is limited. It is expedient to set up a full-fielded internal organization in such undertakings to be continuously engaged in inspection and internal appraisal of performance. Internal Audit in relation to public undertakins should not be viewed as an additional check exercised in advance of e-ternal audit.

(4). Cost Control-

Cot control as the part of financial management function has attracted due attention in recent years in public enterprises in India. ⁵his function is performed by the finance division of undertakings. The cost account department is responsible for maintaining cost accounts. The importance of cost control has been emphasised by the planning commission and Parliamentary Committee on public undertakings that cost reduction unit should be established in each project and standard costing should be adopted.

product can not be fixed correctly and adequate control of various elements of costs can not be exercised.

(5)- Balance sheet and Profit and Loss Accounts-

The balance sheets and profit and loss account presented every year in the meeting of the Board of Directors of the company also provide an opportunity for exercising internal financial control. The balance sheet should be intended to convey a truthful statement as to the company's financial position, and should not conceal any known cause of weakness in that position. Balance sheet is an important mechanism through which the financial operation is controlled. This provides a vide range of opportunities for the authorities conceined to make an over all assessment of the situation, Alongwith the balance sheet, profit and loss account of the company is also prepared and presented to the Board of Dimctors meeting every year.

(6). Statutery Audit-

All the Government Companies are subjected to audit by Chargered Accountants generally called Statutory Audit. By the virtue of the powers vested under a ction 619 of the companies act, the Comptroller and Auditor General can give directions to the auditors regarding the manner in which the company's accounts shall be audited and can give to such auditors, instructions with relard to any matter relating to the performance of their functions.

The auditors of the company are appointed by the Central Government on the advice of the Comptroller and Auditor General of India.

Development of Public Enterprises.

The development of public enterprises in India started mainly after independance During the past-independance period the State Government expanded their activity in several fields, with the initial and primary emphasis on promotional and development undertaking. The speedier growth, infact, started with the second five years plan period

It has been rightly remaired by our former Prime Minister Shri Rajiv Gandhi that the public sector is not
just an industry but an 'article of public faith'. These
enterprises have become the basic pillers of self-reliance,
scientific and technological development and speedy
industriclisation depend upon how with their leadership
steers them sheed.

At the time of indpendence, the agriculture and industrial sectors were in primitive stages of development and government has no comperhensive programme for the country's economic development. It was in 1948 that government announced tis first Industrial Policy to accelerate economic growth. In this policy it was remaked that the problem of state participation in industry and the condition in which private enterprises should be allowed to operate, has to be judged in that context. This resolution recognized the principle of fixed economy, in which the private and public sectors would operate side by side to achieve the objectives.

In this posicy all the industries were divided into four broad categories. In the first category the central government was given the exclusive monopoly to manufacture of arms, the production and control of atomic energy and the management of Railways transport. The second category covered six industries viz. coal, iron and steel, aircraft manufacture, ship building, Manufacture of telephone, telegraph and wireless appartus and miniral oils.

The third category consisted of these industries were regarded necessar; in national interest and they were subject to the control and regulation in consultation with the provincial government. This category covered 18 bands influstries, vis-

17. Air and Ses transport 18. Defence industries.

retained the right to interfere when it think necessary.

The fourth category of industries covered the rest of the industrial field which was open to prévate enterprise, individuals as well as co-operative, Although the government

The need for change in industrial policy was felt soon as several important development and taken place since them, Main of them were, adoption of directive principles of state in the constitution and top priority given to heavy industrialisation in the second five years plan with the result the government announced its second industrial policy resolution on Axil 30, 1956, in this policy, qualify sector was given predominant role to play in the development of the country. All the industries were divided into three categories. There are 17 industries listed in Schedule 'A', in which case the state has undertaken the responsibility of establishing all the new units. In the second category, there were 12 industries listed in schedule 'B', which will be progressively state owned and in which the state will generally take the initiative in establishing now undertakings. In this category the private sector has also been sllowed to develop industrial enterprises of its own or with state participation.

The third category comprises all other industries not listed in Schedule A & B. They have in general been left to the initiative and enterprise of the private sector. However, the State has reserved its rights to interfere even in this category.

The resolution contemplates closer co-operation between the public and private sector and made it clear that the policy of the government is to assist the private sector so that it may feel confident, function efficiently and may assist in the economic development of the country.

The changing condition and the growing experience again necessitated modifications in the industrial policy, 1956, on Pebruary 2, 1973. The Government of India announced some important changes in it providing for the operation of a joint sector and redefinition of larger industrial houses to prevent concentration of economic power in the hands of a few. It has, however, made clear

that the industrial policy resolution 1956 will continue to govern the government policies for achieving the objective of growth, social justice and self-reliance in the injustrial growth.

The public enterprises have come to cover quite a large part of the Indian economy and in this regard. the Industrial Policy 1956 has Decome the charter of its develorment. On December 23, 1977, the new Janta government also announced its industrial policy. According to new industrial policy, "There will be an expanding role for the public sector in several field. Not only will it be the producer of important and stretegic goods of basic nature, it will also be used effectively as establishing force for maintaining essential supplies for the consumers. The public sector will be charged with the responsibility of encouraging the deveropment of wide range of ancillary industries and contribute to the growth of decentralised production by making available its expertise in technology and management to small scale and cottage industries sectors. It will also be the endeavour of government to operate public sector enterprises on profitable and efficient lines in order to ensure that investment in these industries pays and adequate return to society. " 01.

On 23rd. Dec.1980, the Industrial policy of the "Janta Government" introduced some basic changes for the public sector. This policy recognised the forcing problems of

^{01.} The Economic Times. New Delhi Dec.24,1977, page 4.

unemployment and rural urban disparities. The objectives of this policy diverted towards removing the distortions of the past, so that the genuine aspiration of the people can be met within a time bound programme of economic develorment.

"On 23rd July 1980, a new industrial policy was amounced by the Junta Government." This policy insisted not only to restore faith in the rublic sector but also evolve effective op.rational systems of management in the public sector. The public sector was entrusted with the task of raising the pillars of economic infrestructure in the country. This policy stressed on its contributions in terms of generating surpluses and employment for further growth of the economy need to be improved. The government has decided to lauch a drive to revive the efficiency of public sector undertakings. It also proposed to take effective steps on developing on managerial codres in functional fields, such as operations, finance, marketing and information system. "Oli

Uttar pradesh happens to be one of the backward states of the country, At the time of independence the factory establishment and production were quite limited and low. The greater part of industrie, activity was accounted for by small scale industries. The state participation in the industrial field was only limited to financial support to small scale infustries and cottage industries. At that time the state was also backward from the point of provision of infrastructural facilities.

It was only under the planned development programme that government started taking active participation in the industrial

Government of India "Industrial Policy Statement dated 23rd July 1980. The Economic Times Vol.XII. No.120, page 4."

activities for the economic development of the state. During the last seventh five years plan period, efforts were directed towards improving infrastructural of state with a view to accelerate the pace of all arround economic growth in both the spircultural and industrial sphere.

The governmentof Uttar Bradesh has been persuing the policy of industrial development of the state within the overall industrial policy of the country. It is in accordance with this policy that several public enterprises have been set up by the Uttar Bradesh state Government.

Regarding private participation in the economic field, the government of Uttar Praceach has adopted very constructive approach. The Uttar Praceach State Government has established various financial and industrial development units in public sector only for develonement of private sector and private individual enterpreseurs. In this connection the document on fourth five years plan of the state clearly stated that "As far as the state opernment is concerned, besides establishing certain industries in the public sector, it will provide all reasonable facilities to the private sector to play its role in the economic development of the state." Of the state of the

The financial management is important for any business undertaking including of a public enterprises. However, it becomes all the more important especially an an under-developed economy like India, which is striving for rapid socio-economic transformation through a public sector. Notably, as a potent instrument, a well meaning financial appraisal not only helps

⁰¹⁻ Fourth Five Years Plan, Planning Deptt. Govt. of U.P.1969
Page-60.

largely in defecting goal-deviation of a business enterprise but also guides in ensuring effective and efficient utilization of available resources both physical and financial. Remarkably, financial appraisal is neither dispostic in nature nor therapeutic in practice. It is a means of making an appraisal of the various project and making a choice amongst them of the most feasible one in view of the required investment and expected return. Simply financial appraisal is a scientific evoluation of the profitability and financial strength of any business concern. In fact financial analysis is the process of making an anatomical study of the financial and operational data contained in the profit and loss account and the balancesheet of a given concern and thereby satisfying the information need of the internal and external users of such data. On the other hand financial appraisal in the process of scientifically making a proper and comparative evaluation of the profitability and financial health of the given concern on the basis of summarised and analysed data.

In general, every state enterprise has a governing board and exective menagement. As usual the governing board in responsible for taking decision on major policy issues related to the enterprise concerned and also for performance of overseeing function with a view to have sufficient and desirable control over it. The governing board also to see that the enterprise of the government is being operated in accordance with the plans, priority and policies of the government and they are being run in the larger public interest. It has to ensure that various resources of the enterprise are being used in most proper and effective manner in the interest of organisation and to achieve its basis objectives.

The executive management is supposed to implement the policies determined by the board and to run the organisation with maximum possible efficiency. At various levels, the executive manager performs various functions of management, such as-planning, organising coordinating, directing and control of business, as a whole within the scope of besic policies, operational policies and operational objectives of an organisation are also determined by them,

"The overall job of a executive manager is to create within the enterprise an environment which will facilitate the accomplishment of its objective, He will, of course, be also vitally affected by the external environment in which the firm must operate, but he will have little, if any power to influence government policy or economic, social conditions, within the enterprise or his department, however, the manager is responsible for the environment in which his subordinates work. In cooperative enterprises—whether there be government, universities, duruches, hospitals, or business firms— the able manager creates conditions conductive to effective work. In doing this the manager plans the operations of his subordinates, selects and trains them, organizes their role relationships, directs their work and evaluates the results." Oi-

Development of adequate transport facilities is highly essential for the growth of any economy. The Road Transport also plays an important role in this connection. The government of Uttar Pradesh has been alive to this fact and

^{01.-} O, Donell, Koontz, Principles of Management "An analysis of managerial functions". McGraw Hill, Publishing Co. P.46.

has been taking active interest in the development of road transport facilities in the state.

U.P.Government has set up state level public enterprises so far. Out of these U.P.State Road Transport Corporation is the second biggest in terms of employment and fifth in terms of investment.

Initially, the government established a departmental undertaking for the purpose in the name of U.P. State Roadways in May 1947. Later the government realised the difficulties and limitations of running it as a departmental undertaking and with a view to provide better, economical, more efficient and borad based services to the public, it had decided to convert it into a statutary corporation. Accordingly, the government set-up U.P.State Road Transport Corporation under the provision of the central Road Transport Corporation Act, 1950, with a view to provide adequate transport facilities, which is a pre-requisite for the growth of the economy to provide rail -road coordination, to provide and reinforce infra-structural facilities so as to achieve an all around development of the state. Its services have been getting popular and with the result it had to extended on all important routes of state, mostly running parallel to railways, even without the adequate support facilities.

Towards achievement of this objective the main functions of the comporation can be listed as under-

- to operate road transport services in the State and in any extended area.
- (ii) to provide for any ancillary service required for the efficient functioning of the organisation.

- (iii) to purchase vehicles of such type as may be suitable for use in the road transport services.
- (iv) to provide facilities for the consignment of storage and delivery of goods.
- to train person in order to improve the skills, so that their officery could be improved, render assistance to others for the provision of facilities for training, education and research.
- (vi) to manufacture, purchase, maintain and repair rolling stocks vehicles, plants and equipments.

When it was running as a departmental undertaking, it was financed entirely by appropriations from the treasury and all or a major share of its revenues were paid into the treasury. Besides this enterprise is also subject to the budget, accounting and audit control applicable to other government activities. The total investment at that time when it was departmental undertaking was Rs. 2292,93 lakhs.

On 1st May 1947, the total investment was Rs.210.58 Lakhs, which increased at the beginning of the first five year plan was Rs. 315.54 lakhs.

U.P.State Road Transport has been operating buses all over the state and being an essential services. It is highly desirable for it to provide prompt and efficient service to the people of the state. For the purpose only efficient management enable the U.P.State Road Transport Corporation to fulfil these requirements.

The overall management of the corporation has been entrusted to a board of directors. Its main functions are policy making giving direction for their execution and exercise sufficient control over the working of U.P.S.R.T.C. The overall control of the corporation has been vested in a board of directors constituted in accordance with the provision of Central Road Transport Corporation Act, 1950. The Act gives a great amount of latitude with recard to the constitution of board.

Scope of Study

The U.P.State Road Transport Corporation has a unique place in the economy of Uttar Pradesh and it is one of the most important State/ level public enterprise. It is second biggest of U.P.State enterprises in the terms of emolument and fifth in terms of investment.

The operations of UPSRTC have been increasing substantially but it can not be taken to be a successful undertaking. Its operations have to be subject to severe criticism from time to time. Its management have been making efforts to improve its working and fulfil objectives with which it has been set up, but they have yet to show and prove their mettle in taking it out of red and provide quality services to the public of the state at large.

The study of this unit, has been undertaken mainly with a view to make in depth study of UPSRTC, to find out the actual position of its financial management.

Efforts have been made to study its efficiency, specially in firancial area. Is its performance satisfactory in financial area or not? If not, what are the reasons for unsatisfactory performance? What has been the results? What has been done further to bring necessary improvements?

The present study comprises of 7th. Chapters. An attempt has been made to study the place of 0.P's contribution to economy of India, role of transport in development, role of road transport and UPSENTC in development of U.P. and India.

The ministrical position of state enterprises has been studied and then the growth of enterprises specially since independance. The growth of U.P.State Road Transport Corporation has been studied since independance, specially from 1972-79 when the corporation was formed.

The main aim of the study is to measure the financial management of UPSRTC specially from 1972, when it started operating as a corporation. An attempt has been made to understand the envolving pattern of managerial efficiency in the state Road Transport Corporation, mainly on the basis of critical analysis of all the aspects of road transport confilicts. The conflicts are relating to financial and posefinancial both.

Methodology of study

The present work has been divided into 7 chapters. In the beginning of the first chapter the significance of the study has been discussed and brief xm8 outlines of financial management and growth, objectives and trends of public enterprises in state and form of management have been given, which naturally lead us to study the managerial aspects of public enterprises, with special reference to UNSERTC.

The second chapter which follows deals with the growth of public enterprises in Uttar Pradesh. The part of

study has been made with an object to construct the outline of UPSRTC in Uttar Pradesh.

The third chapter has been exclusively devoted to the study growth of U.P.State Road Transport Corporation since 1972 when it was formed, which one of the main fadtors of our study.

The fourth chapter of the study is related to governing board and management of UPSRTC.

The fifth chapter is devoted to long term financial management in UPSRTC has been analysed the long and short term financial management in UPSRTC.

The $^{\mathrm{S}}$ ixth Chapter is related to working capital of UPSRTC.

A critical appraisal of financial performance of UPSRTC has been elaborated in detail in seventh chapter.

In the ends centain conclusion, observation and recommendation based on the analysis of the preceding chapter have been given. It has several valuable suggestions which must have definite bearing on the performance of U.P.State Road Transport Corporation.

The data of study have been drawn mainly from the secondary sources although primary datas also have been made use of whereever the secondary sources were not adequate. For the collection of primary data, field investigation was resorted to through the combined method of questionnaires and personal interviews.

In the present study, we have depended more upon the information compiled with the help of various annual reports of UPSRTC and personal visit to head office of UPSRTC, Lucknow many a times, Consultation with the Senior Officers was made, Various five year Plans, and annual plans of U.P. also helped in our study. The reports of Comptroller and Auditor General on public enterprises also helped us to get necessary information regarding this study.

...

GROWTH OF FUBLIC ENTERPRISES IN UTTAR PRADESH

CHAPTER II

Growth of Public Enterprises in Uttar Pradesh-

It has been verily said that Uttar Pradesh is the hear and soul of India. It occupies a central position in northern India. It lies between 230,52' and 310, 28' norther latitude and 77°.4' and 84°.38' eastern latitude. Its boundaries on the north, east, west and south have been defined by nature. In the north, the shiwalik ranges and the great Himalyan mountainous zone and in the south Vindhya ranges have demarkated its boundaries and it is surrounded by the states of Tibbat and Nepal in north, Madhya Pradesh in south, Punjab, Hariyana, Rajasthan, Delhin west and Bihar in east. It covers a large area, perhaps the biggest area compared to ary of the states of India union, except Madhya Pradesh, Rajasthan and Maharashtra. It is fourth largest state of India. The total area of Uttar Pradesh stood at 2,94,411 sq. km. (11,3,656 sq. miles). From the population point of view, Uttar Pradesh is the biggest state in India. The total population of Uttar Pradesh was 11,08,62,013 according to census of 1981.

The entire region under review may be divided into separate regions, such as the hilly region of the north, the open plains of Ganga, Jamuna, the plateau region of south west and Bhawar and Tarai area. Though from the political view point the mountainous regin seldom influenced in the course of history yet its economic importance can not be ignored altogether. The two great epics Mahabharat and Ramayan apeak about the establishment of Aryan Kingdom in Mecrut and Ayodhya. Mahabharat describes the contest between Kouraya and Pandyas.

The most important language of the state is Hindi, spoken by 84.67 % of population as its mother-tongue. The second most important language is urdu spoken by 10.70% of population. Six major communities live in the state namely-Mindu, Muslims, Sikhs, Jain, Christitian and Buddhists,

During the 19th century, the power of British gradullay extended towards West Bengal. In 1836, the possession of East India Company in the present of Uttar * Pradesh and Delhi were combined under the name of norther-Western province. The remaining portion of Jaluan. Hamirpur and Jhansi were acquired later during 1840-53. Awadh, which had remained out till then, was annexed in 1856. In 1858, the whole of the north western Province, excluding the Delhi division, was formed wnto a single administrative territory and capital transferred from Agra to Allahabad. In 1877, the combined province was known as Norther-Western Provinces of Awadh. The name was change; in 1802 to the United Provinces of Agra and Awadh. In 1937, it was shortened to United Provinces and after few years, the capital was transferred from Allahabad to Lucknow. On January 12, 1950 its name was changed to Uttar Pradesh. At present it has 60 districts and 11 commissionaries. The total income of state as current prices came to Rs.6,880 crores in 1985-86 against the income of Rs. 1490 crores in 1948-49. Uttar Pradesh has an unenvious nosition in the industrial map. Inspite of its large nopulation and area. Uttar Pradesh ranks fifth amongst various states of the country regarding industrial units. In the small industries sector U.P. ranks third after Punjab, and Maharashtra.

The economic growth of the state has been slow, as a whole, there has been heavy reliance on private s.ctor for

accelerating development of state. More than 75 % of population depend upons signiculture, which is wholly operated under private sector. The industries also were mainly developed by the private sector. Prior to attainment of indpendance of the country, its economic development was almost conspicuous by its absence due to colonial policy persued by the elden rule on the country.

Growth of public enterprises in India, took place only recently and development of industrial enterprises set up by state government of U.P. took place even more recently. The longest history of the state working in business is that of mining. Stone-quarries were worked departmentally in Mirzagur, Almora and in some place of Bundelkhand region. The stone quarries were under different departments at different times. In the initial stages, Directorate of Incustries supervised the work but later, in 1910, public works department undertook the work of stone quarries and used the stone for construction for the public purpose. It was 1907, the government established a harness and saddlery factory at Kanpur., which was known as Counpora. Most of the products of the factory was utilised in the army. At the time of first world war in 1914-19 nearly 2,325 employees were working in that factory.

Another notable work of the state in this field was the establishment of opium factory at Gazipur. This factory processed all the opium leaves. The factory occupied an area of about 45 acres field and its main activity was to prepare opium for the Chinese market, where it was known as Banarasi opium. Opium was also auplied froam United Provinces for consumption purpose to m. my provinces like Punjab, Bengel Assem and Burma. The factory had been also producing Marphia and its salt and codis for medical purpose. Puring the busy season from Agrill to June about 3500 persons were employed daily while at other times number of

persons were from 500 to 2000 per day.

In 1919, the government of Uttar Pradesh established two more factories know as Turpentine and Rossin factory, Saw mill and Tannery at Bareilly. But due to heavy losse incurred by them, the government transforred them to private soctor. Therefore, the management of company was transferred by the U.P.Government to a syndicateof private entrepencure, who subsequently by the managing agency of 'the company to M/s. J.P.Srivastava and Sons of Kanpur. They managed the affairs of the company till 1947, when the management was again taken over by the U.P.Government during 1947-48. The main objects and functions of the company are to manufacture and sale of Rosin and Turpentine and other by-products. The raw material used by the company are time, resin supplied by the U.P.P.Government.

The government of Uttar Pradesh also initiated the commercial activities within the state in cottage industries and hardicrafts. A plan to encourage the cottage woollen industries was established in 1935 when the government of India sanctioned 8s.18, 500/- for improvement of designs in the production.⁹¹

With a view to provide reasonable price and marketing facilities to the artisans, government established United Provinces of Arts and Crafts Emporium in 1936. The performance and responsibility of emporium was Mynite satisfactory. The sales performance of Art and craft Emproium

^{01- &}quot;Administration Report of the department of Industries and Commerce, United Provinces- 1937-38, Page-16.

was Rs.216578 from 1936 to 1939. In 1939-40 Arts and Crafts Emporium was merged with the United Provinces Handloom Emporium. Prior to merger, these two emporiums were managed by department of Industries of Government. In the field of handloom, the government had set-un stres at Gorakhpur and Mahaher at Basti for trading activities in Obtton handloom. But later on, these stores were transferred to cooperative society, same steps were also taken in case of store at Sandila, Mau, Barabanki and Amroha (Moradabad). The main object of the mercer of above two emporium was to create a centralised marketing organisation for the sale of goods manufactured by the artisians. The board had 35 agencies within and outside the province for the marketing purposes. Besides, marketing board had 14 manufacturing units at the following places-01

- 1. Amroha at Moradabac district
- 3. Sandila

2.

- 4.
- Barabanki

Etawah

- 5. Gorakhpur
- 6. Maunath Bhanjan at Azamgarh district,
- 7. Khairabad at Sitapur district,
- 8. Mallawan at Hardoi district,
- ٩. Kalyanpur at Kanpur district
- 10-Sikandrabad at Bundelkhand district,
- 11. Magaher atBasti district 12. Ichauli at Barabanki
- 13. Gazipur
- 14. Mara.

and Comme: ca United Provinces-1937-38. Page.35.

In the sphere of financing also, the government adopted positive as groach in order to encourage the development of minor industries in the province by providing them with financial accommodation. A M limited liability company known as the United Provinces Industrial financial Corporation Ltd., was established with an authorised capital Rs.50 lakhs in 1938. The registered office of the corporation was slifted from Lucknow to Kanpur in the month of March, 1940. A sum of Rs.18.823 was paid to the Corporation by the government in December 1939 on account of goods subsidy for the year 1938-39. During the first 17 months of its working, the corporation made a profit Rs.16,393. In the board of the corporation, there were 3 directors appointed by the U.P.Government. The main function of the Corporation was to provide loans at the moderate rate of interest. Subject to certain conditions the government had agreed to make annual payment to the corporation not exceeding Rs.1.5 lakhs per year.

Another development in this period was the nationalisation of passanger transport services by the U.P.Government in May 1947, with a view to provide economical and comfortable transport facilities and also to aid arround development in the state, under the Road Transport Corporation Act, 1950 passed by the Union Government. The U.P.State Road Transport Corporation was established on June 1, 1972 and U.P.Government Roadways was merged with this orporation. The head office of this corporation was established at Lucknow.

The government of Uttar Pradesh took more interest in the establishment of the business enterprises directly only after the attainment of independance of the country.

The main objectives of these enterprises can be summarily enumerated as under:

- Development of basic infra-structure such as construction of roads and bridges, provision of electricity for the industries and irrigation for agriculture.
- (ii) Exploitation of local fesources and entrepreneurship,
- (iii) Promotion of balanced regional development.
- (iv) Upliftment of weaker section of society like Harijans and Girijans.
- Provision of better amenities to the society in general in the form of adequate and efficient and economic road transport.
- (vi) Setting up of manufacturing corporations to take over and reviving back to life the sick industrial units.
- (vii) Improving the health of its citizens by the provision of safe potable water, whole some milk and other datty products.
- (viii) Provision of shelter to the needy
- (ix) Protection of the agriculturists and the consumers from the exploitation of the middlemen.

Before the attainment of independance, there were only two State Government enterprises were run by U.P.State Government, in which the total investment was Rs.221.76 labhs. These two government enterprises were Indian Turpentine and Rosin company and U.P.Government Roadways. During 1947 to 1950 only one enterprises was added in total number of state government enterprises. This is the central bairy Farm, Aligarh, which was nationalised in Nov.1948 by the U.P.Government. This farm was established in 1899 by Edward Keventor. The main purpose of this farm was to produce standard quality dairy and piggery products as well as mutton. Another objective of this farm was to create a centre for training personels in various aspects of husbandry. At the end of 1949-50, the total investment in these three enterprises was

Growth of State Enterprises Since 1950:

phenomenon specially since 1950. Britishers, who ruled India for a very long period, established only few enterprises in public sector, only to rule the country affectively such enterprises included posts, telegraphs and ordinance factories. Railways during British period were started in the private sector. The issue of public use private sector gained significance after indpendance. The first industrial policy statement issued by the government of India in 1948, which was later amended in 1956. This modified resolution of 1956 reaffirmed that "all industries of basic and strategic importance or in the nature of public utility services would continue to be in the public sector. Industries, which are essential and require investment on a large scale which only the state in the present circumstances could provide would also be in the public sector. " The need for creation of public entemprises was felt after attaining political indpendance in 1947. This was needed for quester production and proper distribution of wealth, which private sector failed to achieve during long life of its stay in almost in every sector of economic activity. The objective for creation of public enterprises was toprovide a firm bose of setting upcore industries like power, coal, steel fertilizers, atomic energy and machine building in public sector. During the last four decades the public sector has emarged as major sector in India's economic growth.

Public enterprises are largely a post indpendance

In a public sector undertaking objectives have to be seen in more than one dimension. Public enterprises like any other institution work for fulfilment of needs of certains groups of individuals who have direct or indirect interest in their welfare and growth important among them are government, parliament, share holders, creditors and customers, employees and public. Thus formulation of objectives is important to minimise problems.

For the achievement of above objectives and to solve the problems, during the four decades sine independance, the growth of public sector enterprises in Uttar Pradesh has been enormous-both in terms of investment and scope of activity. During the period 1950 to 1960 the first important development as the establishment of government Precision Instrument Pactory at Lucknown in 1950-51. It started with a capital investment of Rs.26,94 lakhs for the production of water meters, pressure gauges. But the factory did not earn any profit, later on recovered significationally. In February 1975, the U.P.Government transferred the factory to U.P.Instrument Ltd. a joint sector project incorporated by the M/s. Scooters India Ltd. and U.P.State Industrial Development Corporation.

Another notable development of this period was the establishment of government cament factory at Churk in 1953-54. The total capacity of this factory was 4.80 lakes tonnes cement production per annum, with a view to bring efficient management and boost the comment production U.P. Government established the U.P.State Cement Corporation on March 29, 1972 and it was transferred to the corporation with effect from artil 1st. 1972.

In a public sector undertaking objectives have to be seen in more than one dimension. Public enterprises like any other institution work for fulfilment of needs of certains groups of individuals who have direct or indirect interest in their welfare and growth important among them are government, parliament, share holders, creditors and customers, employees and public. Thus formulation of objectives is important to minimize problems.

For the achievement of above objectives and to a colve the problems, during the four decades since independence, the growth of public sector enterprises in Uttar Pradesh has been enormous-both in terms of investment and scope of activity. During the period 1950 to 1960 the first important development as the establishment of government Precision Instrument Pactory at Lucknow in 1950-51. It started with a capital investment of Rm. 26.94 lakhs for the production of water meters, pressure gauges. But the factory did not earn any profit, later on recovered significationally. In Pebruary 1975, the U.P.Fovernment tesserve the factory to U.P.Instrument Left. a joint sector project incorporated by the Mys. Scooters India Left. and U.P.State Industrial Development tool poration.

Another notable development of this period was the establishment of government cement factory at Churk in 1953-54. The total capacity of this factory was 4.80 lakes tonnes cement production per annum, with a view to bring efficient management and boost the cement production U.P. Government established the W.P.State Cement Corporation on March 29, 1972 and it was transferred to the corporation with effect from Arril 1st. 1972.

To give the financial help to the public enterprises in the state, U.P.Government established U.P.Financial Corporation on November 1954. The head office of this Corporation is situated at Kanpur. This Corporation has been helping to many industries in public sector as well as private accorp both.

The U.P.State Warehousing Corporation established on March 19, 1958. The main objectives to establish this corporation are construction of warehouse, quality control and scientific stores etc. in the state. During this period, U.P.Small Scale Industries Corporation, a government company was established on Juno, 13, 1958. The main activities of this corporation are to develope and accelerate the development of small industries in State.

During this period a significant development was the establishment of U.P. State Electricity Board on April ist. 1959, under the Electricity Act 1948. The main functions of the board are the estallation of power stations, generation and distribution of electricity in the jublic.

The following table gives the growth of the State Government Enterprises during 1950 to 1960.

STATEMENT SHOWING THE DEVELOPMENT OF STATE ENTERPRISES DURING 1950-1960.

5.N	o. Name of Industri≎s	Year	Total Investment (in lakhs)
1.	Government Precision Instrument Factory	1950-51	42.83
2.	Government Cement Factory	1953-54	348.62
з.	U.P.Financial Corporation	1954	187.02
4.	U.P.State Warehousing Corporation	1958	.15.00
5.	U.P.State Small Industries Corporation	1958	10.18
6.	U.P.State Electricity Board	1959	7,253.71
	TOTAL AMOUNT INVESTED		7,857.36

The above table shows the number of public enteprises

On 20th. August, 1960, the state government of Uttar Pradesh had taken over a company of M/s.vibhuti Glass Wärks. It was incorporated in 1940 as a public limited company at Ram Nagar, Varanasi. The agreegate of outstanding loans and interest due with company amounted to Rs.10.84 lakhs as on 20th.August, 1960, when the glass factory festaken over by the government on lease for a period of 20 years. According to the lease-deed executed between the owner of the company and government, the profit and loss is to be shared between two parties in equal portion on the expiry of lease period. The factory which is since then being run as a departmentally managed undertaking a government is engaged in moking bottles on automatic machines,

The U.P.Seate Industrial Development Corporation was established on March 29,1961 as a private company, registered under the Indian Companies Act, 1956. The company has a subsidary company also named M/s.Almora Magnesite Ltd.
The Corporation rendered financial assistence by under-writing the issue of shares of public Limited Companies.

The U.P.Government Employees Welfare Corporation was established by the government under the Societies Registration Act, 1860 on May 3rd, 1965. The main activities of this corporation is to promotethe Welfare of State employees employed in the rubble enterprises.

On 20th, January 1966, the State Government of Uttar Pradesh has established U.P.Export Corporation as a government company. The Corporation has been coordinating, — the activities of the exporters with various export promotion councils. Besides this, the corporation undertakes the internal marketing of various products also. This Corporation also helps to the exporters to take interest in international markets.

The U.P.State Government established U.P.State Agro Industrial Corporation on Mgrc12, 1967. This Corporation promotes the agro industrial development of the State. This corporation deals many activities in the field of agriculture and help the formers. The U.P.State Government established another cement factory, known as government cement factory at Dala. The main objective of the establishment of this factory was to increase the production of cement in the State.

The U.P.State Textile Corporation was established on Dec.2, 1969 for the production of yarn. The main objective of the corporation was to establish textiles Mills and undertakes their management. At the time of establishment the Curporation had two subsidiary companies named as company No. 1 and No.2. Th.re were 4 mills in company No.1, at Maunath Bhanjan (Azamgarh), Abbarpur (Falzabad), Barabanki and Ralbareilly, and 4 mills in

company no.2 at S_2 ndila, Rampur, Kashipur and Magaher (Basti). The head office of the corporation was established at Kanpur.

The period from 1970-1980 may be marked as an important era, as it witnessed a phenomenal growth of State Government enterprises in Uttar Pradesh. During this period, 46 public enterprises were established in diverse field. Three departmental undertakings vig. U.P.Government Roadewsy, CentralDairy Fare, Aligarh and Government Cement Factory (Churk and Dala) were merged with the newly established corporation named U.P.Seate Road Transport Cor orations U.P. Pasudhan Udyog Nigam and U.P.State Cement Corporation. The fourth departmental undertaking U.P.Government Precision Instrument Factory was transferred to U.P.Instruments Ltd; a joing sector project in 1974-75.

Over all picture of growth of such 61 public enterprises in Uttar Pradesh can be seen with help of the following table. The table shows the growth and total investment of these 061 public enterprises-

Source: A Hand Book Public Sector Enterprises Sarvaganik Uddyam Bureau, Macknow The above table No.2-2 shows, the total investment in 61 enterprises (including six enterprises established in 1976-77 and M/s.?ibhuti Glass Horks Varen,ei) was Rm.5,63,074 lakhs at the end of 31st.Tarch 1967.

The above table doe above that mergy is an important of correct which State onto ryalogo, and lying the manjor doubt of states resources. In a fixing to the State Electricity Bourd UP Raya V. Just Uppeden Nigom has been set up which is observed in the containt the the blasher the mental bourk Project. To fine usually and implement the india of decre byded projects on a not hills trees, a separate company has been set up the company is presently implementing times and hydral projects and is undertaking studies and survey etc. for 19 others unstates.

5.587 Ao.

Major enterprises under manufacturing group or Coment, Sugar , Textile and Auto-Tractors, while coment units were set up to utilise the lime stone deposits available in Mirzapur District, Sucar Units are the r sult of take over of sick super units area priv to sector in 1971, specially to look after the inter st or cane rovers. efforts could be made for their rehaldlittetion, modernisation and expension, as the unit: were quite ald, with a modete thechnology and nonviable capacity, Austile corporation was set up to provice cotton yarn to the handloom wear as scattered over the state as the entire yarm requires t of U.P. was being not by the units outside the state. The corporation has set up 13 spinning Hills with one 5 lac saindles to fetch not only the mode of the state but has also been propositely exporting its years to foreign countries and coming for ign woney. The Comports on how very good inditoring at wall is avecasefully on this liki the privet sector units.

A Tractor Unit, Auto Tractors Ltd. was set up at Protapparh in the backward area of the state to accelerate the development of agriculture. The unit has hed is a own troubles since inception and is running under an authorism.

In the scride sector there are 8 interprise s, like process of all highest archeming temperature or . all these enterprises regulate utilities provided them. In an including the state of the state. These enterprises arcount for more than 25% of the total employment in 5:nto enterprises.

There are 3 ente priess in the Finencial and Promoticial actsequer, nemoly, UPPC, PEUD and Fanchayati Rlyw Vitta Rigem. The first two are engaged in providing finend all assistance in the industrial development of the state and have dome crosedingly well and remained as top performance. This pod principles of time will place the state on the industrial map of the country. Panchayeti Rej Vitta Higgs provides assistance to Panchayeti Rej institutions and contributes to the development of small scale rural industrial.

17 Setoral Development Corporations have been set up to ester to the specific needs of the different sectors of the industry in the State with emphasis on value added. Enterprises in fields like Bressware, leather and Handloom have hiped to small and poor utisans which were being exploited by the prevalent trade practices through imparting training, providing raw mat rials and marketing their produce.

U. P. Electronics Corporation has been set up for the development of the electronics industry. It is not only competing with other electronics units in the country specially in consumer electronics and computer hardware but also has been working as a development agency in this vital sunrise industry. It has been able to attract and establish a number of electronic component industries, which will go a long way in the overall develorment of the state. Similarly for exploitation of mineral resources of the state and develoring fisheries, tourism, forest, w.ath, separate corporations have been set-up. Chalchitra Higam owns the largest chain of Cinema halls in the country and is an effort to reach the rural massege and provide thom recreational facilities. It has, however, been recently closed down. To assist the cane growers four Corporations have been istablished on area basis to provide financial assistance for procurement of seed fortilizer and pesticides etc.

Divisional Devaloyment Corporations, were set up in each revenue division to concentrate on the devalopment of the revenue divisions through setting up of units based on evailable raw materials and to assists the local talents in setting up small scale units.

For the development of Economically Wesher Scations, i.e. the scheduled Castes and Scheduled Tribos and minorities, 5 Corporations have been set-up, to provide spe ific schemes for their upliffement specially in the area of the finance and housing, imparing transcriptions.

There are five enterprises under the construction Sector. Two construction corporation which are off-shoot of the state, Public Works Department have been set up to develop competitive strength, not only in the works of the state but also to undertake jobs outside as contractor. These corporation, i.e., Bridge Corporation, Nirman Nigam have developed by not only completing the works assigned by the state in time as far as possible but have also been able to secure contract works too.

Besides, local development authorities in major towns, the U.P.Housing and development Board has been continuously endevouring since 1966 towards solving the housing problems of urban population in the State. The U.P. Police Awas Nigam has been set up recently specially to construct houses for Police personnel and department in a time bound framework. An other enterprise UPSIDC is already engaged in providing developed plots and sheds for industrial purposes.

The summerised position of Public Enterprise of the state is as under. The following table shows the form of organisation of the U.P.State government enterprises.

CHAPTER III

GROWTH OF U.P.STATE ROAD TRANSPORT CORPORATION

GROWTH OF U.P.STATE ROAD TRANSPORT CORPORATION:

Introduction-

From earli-st time "there is record of road and wheeled wehtcles in Inuia. Good roads, easy communications necessorily go with civilization and civilized administration, and the Indian civilization goes back not less than five thousand years." I

The ancient literature of India is full of reference to the existence of good roads. The most ancient literature 'Rigveda' contains the description of 'Mahapath', the roads. The excavations at Mohan Jodero in Simih and Harappa in Punjab reveal that these cities, which existed in 3500 and 2500 B.C., had broad streets with a good system of drainage on both the sides. One doubled wheeled chariot toy has also been found in the excavations of Harappa. Buddha literature is full of ro.o descriptions. Kautilya's Arthsastra vividly describes the roads and their administration during Maurya's period. During the time of Chandragupta Maurya there was a transport department to look after the maintenance of roads. During the period of Muslim, Mohammad Tuglaque got constructed a trunk road from Delhi to Daulatabad. Shershah Suri is popularly known as a great road builder in Indian history.

It was with the establishment of the British rule in India that the pace of development of roads was accelerated. In this period also the roads were mainly constructed with the strategic and administrative point of view.

Bentinck and Lord Dalhousie took interest in construction of roads by connecting Peshawar, Delhi and Calcutta by extending G.T.Road by 420.4 km. in 1948.

After indpendence, road development has been considered an integral part of our planned development. On the eve of first plan, it was admitted that the road system of the country was a short of requirements, keeping in view the large area and population. The plan visulised a balanced development of all kins of roads. The priorities for national high ways were fixed by the Central Government and for the state, districts or other roads by the individual states in accordance with their own requirements.

As compared to other countries, the motor transport in India is of recent origin. The first Motor vehicle was imported in 1898. But the development till the first World War remained very slow. As a public carrier its use was very limited. There were only 4,000 vehicles in 1913. Poor road condition was one of the important factors responsible for its slow progr.ss. The total number of motor vehicles on the road at the beginning of first five year plan was 2,94,727 which rose to about 4,18,000 at the end of the plan. out this increase was considered very small in view of the size of the country and its population. It was expected that the motor transport would rise very rapidly due to general growth of economy. In order to review the problems of road transport development, the Planning Commission formed a special study group. The Planning Commission further recommended liberalisation of terms of permits to the private operators. A provision of Rs.89 crores was made in the fourth plan for augmenting the services of the nationalised

transport undertakings in the states. In addition, the Railways had contributed Rs.10 crores to the capital of road transport undertaking.

Growth of U.P.State Road Transport Corporation:

U.P.Government has set up 58 state level public enterprises upto 1988. Out of these UPSRTC is the second bigg-est in terms of employment and fifth in terms of investment. The road transport plays an important role in faster economic development of any area. Keeping this in view, U.P.Government has been taking active and keen interest in the development of Road Transport facilities in the state. The U.P.Government established a departmental undertaking for the purpose in the name of "U.P.Government Rowdways". The operation of the state Road Transport passengers Bus Services was started on 15th. May 1947 on Lucknow-Barabanki Roac, to promote Rail Road Coordination and balanced development of various modes of transportation. The service grew popfilar and had to be extended on all important routes of state mostly running parallel to Railways. This programme was included in the State Sector during the first five year plan of the state and was retained as a plan programme upto the second year of the second five year plan of the state.

The government of Uttar Pradesh realised the difficulties and limitations of running at as a departmental undertaking. For this reason and with a view to provide better economical amb broad-based services to the public, the government decired to convert the departmental undertaking to a statutory corporation. Accordingly, the U.P.S.R.T.C. was set up on June 1st, 1972 as a statutory corporation under Road Transport Act, 1950 with a view to provide adequate transport facilities and balanced development of various moves of transportation. Its services have been getting popular and with the result it had to be extended on all important routes of state mostly running parallel to railways, even without the adequate support facilities. The head office of this corporation is situated at Lucknow.

The main purpose for which corporation has been set up is to promote the provision of an efficient, adequate, economical transport services in the state. The main objective of the corporation was as under:

- to operate road transport service in the state and in any extended area;
- (ii) to provide for any ancillary service required for the efficient functioning of the organisation;
- (iii) to purchase vehicle of such type as may be suitable for use in the road transport services;
- (iv) to provide facilities for the consignment, storage and delivery of goods;
- to train persons in order to improve their skill add thereby their efficiency, render assistance to Kother for the provision of facilities for training, education and research; and
- (vi) to manufacture, purch_ase, meintain and repair rolling stocks, vehicle appliances, plant and equipment, etc.

When it was run as a departmental undertaking it was financed entirely by the appropriation from the treasury and all or a major part of its revenues were paid into the treasury. Besides this enterprise was also subject to badget, accounting and audit controls applicable to other government activities. The total investment and net-profit at that time when it was departmental undertaking, has been analys d in the table no.3-1.

TABLE No. 3-1

STATEMENT SHOWING THE INVESTMENT AND NET-PROFIT IN

	U.P.GOVERNMENT ROADWAIS.	(Rs. in lakhs)
Year	Capital invested	Net-profit
1949-50	285.16	-
1950-51	315.54	20.18
1951-52	347.57	12.58
1952-53	372.59	5.73
1953-54	389.50	19.51
1954-55	430.19	33.06
1955-56	445.94	52+33
1956-57	540.09	77.67
1957-58	615.99	117.24
1958-59	824.52	148.63
1959-60	953.45	203.18
1960-61	1105.30	214.70
1961-62	1307.32	213.60
1962-63	1489.25	211.66
1963-64	1660.18	186.39
1964-65 1965-66 1966-67 1967-68	1690.71 1737.46 1784.73 1805.77	175.30 215.44 3.86 151.09
1968-69 1969-70 1970-71	1841.18 1984.50	255.38 196.86
1970-71	2108.25	240.38

It may be seen from the table No.3-1 that the total investment in the Gov.rmeent Nosdways had been continuously increasing. For the year ended 1950, the total investment was Rr. 285.16 lakhs, which increased to Ra.315.54 lakhs in 1950-51, with a net profit kr.20.19 lakhs. The percentage of met profit on total investment in this period was 6.39%.

At the end of first five year plan (1955-56) the total investment increased to Rs. 446.94 lekhs and net-profit Rs. 12.58 lekhs. Thus, in 1955-56, a net increase of Rs. 131.40 lekhs over the 1950-51.

It again increased at the end of second five year plan (1960-61) to Rs.1105.20 lakhs and net profit increased Rs.659.36 lakhs over the first five year plan. In 1960-61 the percentage of net profit Rs.214.70 lakhs to capital invested (Rs.1105.30 lakhs) is 19.42.4

In the third plan the total invescement increased to Rs.1737.46 lakhs in 1965-66 in comparision to Rs.1105.30 lakhs in second plan. Mence, there was a pet increase of Rs.632.16 lakhs over 1960-61. In 1965-66 the net profit was Rs.215.44 lakhs. Rs.1784.73 lakhs in 1967-66 and Rs.1841.18 lakhs in 1968-69 are invested in three aniuel plan respectively. During the fourth five year plan, the State Government took more interest in it and provided more amount for the transport development. In the beginning of fourth five year plan, the total investment was Rs.1984.50 lakhs, which increased to Rs.2106.25 lakhs in 1970-71.4 and tincrease of Rs.221.75 lakhs. It again increased to Rs.27,292.93 lakhs in 1971-72, an increase of Rs.184.62 lakhs one 1970-71.

•65•

The percentage of net-profit to capital invasted was 9.20% in 1969-70 and 10.80% in 1970-71. During 1971-72 the undertaking earned a net profit of Rs.288.12 lakis, which was 10.70% of capital invasted (amounted to Rs.2292.93). There was no ay Capital invasted in first two months of 1972-73. The net profit of two months viz-April and May 1972 was Rs.65.27 lakis.

In 1972, the U.P.Covernment converted the Roadways in form of corporation named U.P.State Road Transport Corporation. The U.P.Covernment had placed at the disposal of the corporation Rs. 12 crores as equity capital and Rs.18 crores as loan. In 1972-73, the state government advanced a further loan to Rs. One Crore as loan Beginning the total amount to Rs. 19 Crore. In 1972-73, State Bank of India provided loan amounted Rs.50 lakhs. The total investment and net profit after establishment of Corporation has been analysed through table no. 3-2 as on next page:

TABLE No. 3-2

STATE ROAD TRANSPORT CORPORATION.

Source: Annual Report of UPSRTC 1987-88

Note: The data after 1979-80 are not certified by A.G.U.P.

It may be seen from the above table No. 3-2 that the total investment in UNSERC had been continuously increased except in 1977-76. The total investment in 1972-73 was Ra.25.97 crores, which increased in 1973-74 to Rs.30.05 in 1974-75, a net increasing of Rs.4.08 crores. In year 1979-80, the total investment was Rs.55.99 crores equalmet Rs.65.43 crores in 1981-82 anc. Rs.92.23 crores in 1982-83, Rs.107.11 Cr. invested in year 1983-84, while it im reased upto Rs.132.05 Crs in 1984-85, Rs.163.55 Cr. in 1985-86, Rs.204.99 Cr in 1986-87. Only in 9 months of year 1987, the capital investment increased Rs.225.81 Cr.

If we analyse the table No.3-1 and 3-2, we find that as a departmental undertaking upto May 1972, the U.P.Government Roadways earned profit, but after converted into a Corporation, heavy loss incurred. During 1976-77, a profit of Rs.1.21 corres earned by the Corporation, while after 1976-77 the loss in UPSNTC had been continuously increasing except during the year 1983-84 am 1984-85. Jut after the year 1985-86, the corporation earned nominal profit, which was Rs.7.54 Cr. in 1986-87 and Rs.7.58 Cr. in 1987-88.

As a corporation it had to pay income tox on net profit, pryment of fees, Sales Tax, which was not acquired to be paid by it as departmental undertaking. Although private owners already paid these charges and fees yet they earned profit. Its reason was mis-manugement of Corporation in comparison of private cowners.

Although the Corporation had incurred heavy-losses yet overall position regarding the routes and its total distances have been increasing continuously. The growth of URSRC has been quite spectacular, judged from the point of number of routes and distances in the first decade of its existance - (1972-62). The number of routes increased from 1,111 in 1973 to 1972 in 1982. However, it declined in 1983 and remained almost stagnant in 1983-84. The distance of routes increased from about 145 thousand Mams. to about 288 kms. in 1981, or it almost twice during them period. This also declined during 1982-83, 1983-84, and 1984-85. But it again increased 1985-86 and 1984-87. The total distances and number of routes under the operation of U.P.State Road Transport Corporation has been analysed in the table no.3-3 on next pages.

TABLE NO.3-3
STATEMENT SHOWING THE ROUTES AND THEIR TOTAL DISTANCES

Year	No. of Routes	<pre># increase decrease over the previous year.</pre>	Distances of Routes (Kms.)	% inc decre over Previ year.		Mean distar ces Km.

Source: Annual Report of UPSRTC 1987-88

On the analysis of the table No.3-3 on pre-page we find that mumber of routes and their distances have been increasing except 1983-84 and 1984-85. At Narch 1973 the total number of routes was 1,111 with a total distance of 1,44,974 kms. It increased to 1200 routes with 1,43,492 kms. distance at 31st.Narch 1974, and number of routes increased from 1208 to 1256, which was 4% on previous year 1976.

During the period from 1975-80 development of nationalised transport services accelerated in the state considerably. In 1975-76, the total number of routes was 1310 with a distance of 1,66,462 Mas, which increased to 1782 routes with distance of 2,63,178 km. in 1979-80. In comparis/on of 1974-75, the meah distance of routes also improved from 130 in 1974-75 to 188 in 1979-80.

Upto 31st.March, 1981, the total no. of routes was 1945 with total distance of 2,87,748 kms, which decreased upto 1818 routes with 2,69,626 kms. in 1985. From 1985-86, the number of routes remain increased, it was 2108 in 1986-87 and 2159 routes upto Dec.1987, while the distance of routes was 3,17,117 kms. in 1986-87. During this period the situation remained satisfactory regarding the development of nationalised transport services:

Today, UPLRTC is playing its fleet of buses on all important routes of the state, trying to penetrate remote rural areas, whereever it is possible. It had a fleet of 7,151 buses, 152 trucks and 67 taxies as on 31 Dec.1987 However, it has been able to operate itsfleet of buses only on about 30 percent of the total road length of the State, Whereas, Maharashtra and Gujarat State have already achieved the objective of complete nationalisation, the UPSNTC would take still sometime to achieve it.

The progress regarding fleet composition of UPSETC has been shown in the Table No.3-4 on next page.

TABLE NO.3-4

STATEMENT SHOWING THE OPERATING FLEPT OF UPSRTC:

Year	Buses	Trucks	Taxies
31 March, 1972	4253	410	95

31 Dec, 1987	7151	152	67

Source: Annual Report of U.P.State Road Transport Corporation, Year 1987-88

It may be seen from the table No.3-4 that number of buses in the fleet of UPSATC has been increasing continuously. There were 4253 buses in the year 1972, which increased to 4851 buses in the year 1975, a net increase of 598 buses during four years. It again increase to 5713 buses at the end of 31st March, 1977, a net increase of 862 buses in only two years. But it decrease in the year 1978 in comparison of year 1977, there were only 5376 buses in fleet in the year 1978. But at the end of year 1980, it again increased, a net increase to 303 buses in two years.

During the sixth plan period the total number of buses increased to 6198, a net increase of 1519 buses at the period 1.4.1980 to 31.3.1985. Upto December 1987 the total number of buses increased to 7151.

There were 410 trucks in the year 1971-72, which has been decreasing upto the end of 31st March, 1975 by 166 Trucks. There were total number of trucks with UPBRTC was 179 at the end of 31 March, 1977, which remain decreased to 170 trucks at the end of year 1979, a net decrease of nine trucks. The table shows a downward trend from 31 March 1972 to 31 Dec 1987, the total number of trucks was 152 at the end of 31st Dec. 1987.

There were 95 taxies in the fleet of UPBRTC in 1971-72, which decreased to 65 taxies in 1972-73. There were only 50 taxes in the year 1977-78, while it increased to 55 taxes in 1978-79, showing an upward and downward trend within the period, there were only 33 taxies in year 1980-81 in fleet of UPBRTC. It again increased to 77 taxes in 1986-87. At the date of 31st Dec.1987, the total taxies in the fleet of UPBRTC were 67 only. It is notable that UPBRTC has been utilising the trucks and taxies only for the official purpose.

The growth of UPSKTC from the point of kilometerage and travelled passengers has been satisfactory as total no. of passengers travelled about 32 crores as on 31 Dec. 1987. The overall position regarding kilometerage and travelled passengers has been analysed in following table No.3-5.

(In Crores)

TABLE No.3.5

STATEMENT SHOWING KILOMETERAGE AND TRAVELLED PASSENGERS:

fear	Kilometerage earned by buses	No. of Travelled passengers,	
31 March, 1972	22.86	25.13	
31 March, 1973	23.24	23.82	
31 March, 1974	24.77	27.96	
31 March 1975	26.06	30.55	
31 March, 1976	27.60	32.00	
31 March, 1977	30.68	35.03	
31 March, 1978	31.85	35.76	
31 March, 1979	34.34	39.48	
31 March, 1980	39.62	44.91	
31 March, 1981	42.15	46.10	
31 March, 1982	39.30	41.47	
31 March, 1983	37.39	36.51	
31 March, 1984	40.33	36.80	
31 March, 1985	42.56	35.25	
31 March, 1986	44.22	38,85	
31 March, 1987	47.47	42.75	
31 Dec.1987	40.56	32,25	

Source: Annual Report of UPSRTC 1987-88

It may be seen from the table No.3-5 that kilometerage earned by buses and number of travelled passengers both have been continuously increasing upto 31 March, 1981, while kilometerace earned by buses decreased in 1981-82 and 1982-83 against previous year. But after 1983-84, it increased continuously in both the areas, kilometerage earned by buses ano number of travelled passengers. In the year 1984-85. the total kilometerage earned by bus were 42.56 cr. Kms. with total number of travelled passengers 35.25 cror s. At the date of December 1987 the total kilometerage earned by buses were 40.56 Cr. Kms. and number of passengers travelled by busines were 32.25 Crores. If we see in a clance the progress of UPSRTC has not been quite satisfactory from the point of kilometerage earned by buses and no. of travelled passengers. The position in fact, has been worse during 1981-82 and 1982-83. But thereafter, there is slight improvement in the year 1984-85 to 1986-87.

The growth of UPSRTC from the point of city bus service has not been satisfactory as total no. of passengers travelled. Although UPSRTC has been operating city bus services in only 6 Big cities of the state, fir, Allahabad, Dehradun, Kunpur, Luchnow and Varun, si, yet the earning of city buses are lower in comparison of Depot Bus services. The overall position has been indicated about city buses in the table No.3-6 on next bace;

TABLE NO. 3-6

STATEMENT SHOWING THE NUMBER OF ROUTES AND PASSENGERS TRAVELLED UNDER CITY BUS SERVICE.

S.No.	Particulars	Total
1.	No. of Routes	122
2.	Day-wise total number of buses	122
2.	, operated	354
3.	No. of passengers travelled (in lakhs)	_
	1971-72	595.68
	1972-73	596.72
	1973-74	668.23
	197475	714.26
	1975-76	824.62
	1976-77	941.65
	1977-78	918.47
	1978-79	926.85
	1979-80	967.86
	1980-81	880.50
	1982-82	726.92
	1982-83	727.51
	1983-84	524.54
	1984-85	422.78
	1985-86	520.37
	1986-87	592.11
	1987-88	420.94
	(April to Dec.87)	

Source: Annual Report of UPSRTC-1987-88

It may be seen from table No.3-6 that the total number of passengers travelled by city buses in 1971-72, were 595.68 lakhs, which has been continuously increasing unto 967.86 lakhs in 1979-80, a net increase of 372.18 lakhs passengers within mine years. But after year 1979-80, a pet increase of 372.18 lakhs passengers within nine years. But after year 1979-80. the table shows a decreasing trend upto 1985-86. In 1982-83 total number of passengers travelled by City busines were 727.51 lakhs, which decreased by 363.20 lakhs. But it again increased in year 1986-87 and 1987-88. The total number of passengers travelled by 592.11 lakks in 1986-87. It is, therefore, clear that the growth of UPSRTC from the point of city bus service has not been satisfactory. Its reason is mostly all the cities need more city transport services, but U.P.State Road Transport Corporation is unable to provide more buses for the increasing demand of tran portation.

The number of persons employed in UPSRTC has increased considerably. The overall position regarding employment has been shown in table no-3-7 given on next page.

TABLE NO.3-7
STATEMENT SHOWING EMPLAYMENT STRUCTURE OF UPSRIC

Year		sons employed		Total
	Admin Bran	ch Traffic Bra	nch Engo Bran	ch !
1972-73	2280	20812	7806	30,898

Source: Compiled with the help of various annual reports of UPANTC.

The growth of UFSRTC from the point of employment has been satisfactory as it is clear from table No.3-7. It may be seen from table No.3-7 that the total employment provided by UPSRTC has been continuously increasing. The total number of persons employed in the year 1972-73, were 30,898, while it increased in 1974-75 upto 35357, a net increase of 4459 persons within two years and percentage increase was 111.2 % in comparison to 1972-73. It further increased to 38,000 in 1976-77 and 39246 to 1977-78. During 1981-82, the total number of persons employed in UPSRTC were 46,695 persons, in which, 2,995 related with administrative branch, 29,595 with traffic and 14,305 with Engineering branch. The traffic branch has the larger portion of employees (52% of total employees in 1972-73 and 60% in 1985-86), 1017 persons were employed as daily wages and casual basis, they were 2% of the total. The employees of daily wages and casual basis increased to 2440 in 1986 and they were about 5% of the total. At the date of 31 Dec. 1987 the total number of persons employed in UPSRTC, ere 51,802. in which 3474 related with administrative branch, 33021 with traffic and 15,307 persons with engineering branch. There were 3903 persons (which included in total) employed as daily wages and casual basis as on 31st Dec. 1987. They were about 8% of total employees.

The U.P.S.R.T.C. is also giving emphasis upon the employment of 3C and ST persons also. The table No.3-8 shows representation of SC and ST employees in total employed persons as on ist.Januery 1988.

TABLE No-28 3-8

It may be seen from table no.3-8 that the total number of 'ersons employed in UPSRTC as on 31 Dec.)987 were 47,060, out of which 552 persons belonged to Scheduled Caste and 263 persons belonged to Scheduled Tribes. The percentage of SC employees to total was 11.8 % and 37 was 0.56% Out of total (5552) SC employees, 4 belonged to Class 'Ac, - 11, Belonged Class 'B', 3700 employees belonged to Class 'C' and 1837 persons belonged to Class 'C' in 183 persons belonged to Class 'C' and 51 belonged to Class 'C' and 51 belonged to Class 'C' and 51 belonged to Class 'D'. However, there was not a single employee surplived in Class 'A' and 'B'. It is also notable that the sweeper employers are not included in total no. of employee in UT.207 in the table no.3-8.

The growth of UPSRC from the point of total number to buses and their operation has been satisfactory. The total no. of numes, their operation and day-wise earning kilometerage would be seen from the table no.3-9 on next pages:

Contd.

STATEMENT SHOWING TOTAL NO. OF BUSES AND THEIR UTILIZATION

5.10.	Particulars	1983-84	1984-85	1985-86	1986-87	31.12. 198
1.	Total no. of buses	5892	6040	6167	6452	6894
2.	Total no. of on ro	ed 4214	4362	4681	5436	6006
3.	% on road buses (On total)	72	72	76	84	87
4.	Day-wise per bus operation (in kilometer)	158	158	169	190	206
5.	Total kilometers (in crores)	40.5	42.8	\$544.	47.6	40.7*

Source- Annual Report of UPSRTC Year 1987-88.

Note: * It is only nine month's figure.

It may be seem from the table no.3-9 that total no. of buses and their utilization has been continously increasing. Total no. of omroad buses were 4214 in 1983-84, which increased to 6006 buses on road on 31 Dec.1987. The percentage of onroad buses on total was 72% in 1983-84 and 87% as on 31 Dec.1987. Similarly, in year 1983-84 per day per bus earned 159 ass. while it increased 169 kms. in 1985-86 and 206 kms. as on 31 Dec.1987. It, is, therefore, clear that the utilisation of capacity of buses are continuously increasing and operational result is satisfoctory.

The U.P.State Road Transport Corporati n has been trying to establish the Automobile Mork-shops in every district for the better utilisation of buses. The index of Automobile Work-shops is given latter in fourth Chapter of Governing Board and Management of UNSWIC.

....

CHAPTER IV

GOVERNING BOARD AND MANAGEMENT OF UPSRTC

CHAPTER IV

Governing Board and Management of U.P.State Road Transport Corporation:

(1), GOVERNING BOARD:

Governing Board plays a very vital role in any public enterprise. It is the main policy making body for the progress of an enterprise. It is constituted with the help of various specialists and experienced persons. The men in the board are of vital importance as the success and failure of such enterprises depends upon them. "The Governing Board of a PE is not nominated by the share-holders, who have contributed their valuable resources primurily with the objective of profits maximising but by the state, which wants to fulfil certain socio-economic goals for which these enterprises are basically established." In the field of policy formulation direction and control of nublic enterprises, Governing Board has a very important and definite role to play. It establishes a link between the owners (share-holders) and general public. In other words, the government policy can be effectively and successfully interpreted through the governing board.

The development of leadership in democratic wey is also possible only through the governing board. In case of one man leadership, other people are not in a position to get sufficient opportunities for their development. Hence, Board is also necessary because a single administrature may follow such policies which may lead to over-contraliasting in grower and he may be

reluctant to delegate adequate authority to lower level.

(ii) MANAGEMENT:

Management consists of the rational assessment of a situation and the careful selection of goals, the systematic development of strategies to achieve those goals, the marshalling of the required resources, the rational design, organisation, direction and control of activities required to attain the selected purposes and finally, the motivating and rewarding of people to do the work, ⁰¹ Thus what m.k-s scientific knowledge or invention and machine productive is not their mere existence, but how they are directed.

The management is generally required to deal with man and matter by #"judicious use of means and guide them by skilled and delicate treatment to arrive at definite objectives". Administ tion or management, therefore, requires a great amount skill with which a business enterprise is guided and controlled. Finance, equipment and materials may be organised and employees may carry out their duties but unless the management executes the operations systematically their performance may uscome so uneconomical as to cease entirely. The money, materials and men or their o-mbination provide economic and beneficial results on account of successful operations of the management of the enterprise concerned.

The task of management of public sector enterprises is indeed a difficult one as they are expected to normonise

^{01—} Levitt, Theodore, Management and the Post Industrial Society, - The American Review Vol.21, No.-4 Summer 1977, page-37

the plans and result of operations of their enterprises have to The economic operations of a public enterprises have to be performed in consonance with the social objectives for the fulfilment of which it is set-up. In fact, the management has to achieve several goals which may be conflicting in n ture, as they may be economic as well as non-economic.

Dr.E.F.L.Recoh, defines meanagement as a total process of executive control in invistry and commerce or whereverelse it may occur, consisting of the responsibility for the effective or efficient planning and regulation of the operations of the corporation. The primary function of menagement is to achieve a desired level of production by perfect blanking of human and physical resources.

FUNCTIONS OF GOVERNING BOARD:

The Boead functions of a Governing Board of Public Enterprise have been variously described by different authorities. But a clear-out conception about functions of governing board of PE's have described by Prof. J.Frakash in the Indian context. According to him, the main functions of the Board of PE's would be - [1]

(i) Establishment of Basic Objectives and Policies:

The Board is responsible for laying down policies which include such questions as the determination of quality and quantity of product or services to be produced, pricing policy, re-organisation and development plans, human resource man gement and improvement of organisation structure in an organisation.

Oi- Prof. Prakash, J. "Administration of Public Enterprises In India", Himalaya Fublishing House, Delhi, Vol.I-Page-141-142.

(ii). Fiscal Administr tion:

Majority of the decisions of the Board have financial implications. So control over the funds affords the Board an opportunity to give final accisions on three aspects. New capital investment decisions, recurring and non-recurring expenditures, resource generation, policy regarding divisible profits. Londderation of 'ays and means, current position of the enterprise are seeme of the quentions which constitute the fisical administration function of the sox.0.

(111) HUMAN RESOURCES M NAGEMENT:

It is the duty of Board to select competent personnel to operate the enterprise and to ensure the continuity of able management. The Boards in PBs are free to create any post except at the Board level and to make appointments without any restriction of salary. But at the same time, the Boards are also bound to follow the guidelines in repart to the benfifts to be made available to the employees in respect of provident fund, retirement benefits, dearness allowance, house rent and other perquisites issued by the government from time to time. In addition, consideration of industrial relations, labour welfare and safety have also come up before the Board.

(iv) OPERATIONAL M. NAGEMENT:

The Board is also responsible to review the operation of the enterprise continuously and repolicies, programmes, etc, as necessary by the circumstances prevailing in the organisation. The Board is also required to make contract, lay down future programmes, for the production, form lation of schemes for distribution, their development and reorganisation in the interest of the organisation.

(v). PUBLIC RELATIONS:

It is the duty of the Board to maintain liaison with Government and Parliament. Besides, it is also a job of the Board to consider and take decisions on questions relating to consumers and public from time to time, so that their faith may be maintained in enterprise. In this way, Board is required to fulfil the social responsibilities towards producers, consumers and public at large as entrusted by the government.

(vi). INTERNAL ORGANIZATI N:

It includes the appointment of the principal executive personnel and to lay down the structure of the organisation of the enterprise. The laws and by-laws relating to internal organisation have to be approved by the Board for the proper functioning of the management team.

(vii) LEGAL MAPPERS:

Initiation, operation, withdrawl or support to the legal proceeding by the enterprise or against the enterprise are also to be approved by the Board. The Board is also rewired to take decision on matters like entrustment of any subject to arbitration, insurance proceedings relating to property and other legal formalities in the interest of the enterprise.

GOVERNING BOARD OF UPSRTC:

The number of bureaucrates in the UpSRTC beard in year 1985, were 8 and Technical Directors were 7. The same situation provailed in 1986 also. But there were some ci-nges in year 1987—88. There were only 12 members (including Chairman) in the Board of UPSRTC, out of which 6
Directors were Technical personnels and 5 were
bureaucrates and only one nominated director was
professional one.

It is clear, thet the overall picture has not been satisfactory. Because the financial management of public enterprises must be on scientific lines. It should be manned by professional managers as well as technical. There should not be bureaucratization of financial management.

Effectiveness of Board of Diroctors depends upon the powers, which the board member jointly hold. Hanson mentions that broadly speaking boards are of two kinds. On the one hand, there is the finctional board and on the other policy board. The functional Board consists of full time members incharge of particular branches of work, viz, Froduction, Financial, Personnel, Marketing Management. The men on the functional boards are there because of their expertise and experience in a particular Branch of activities being carried on by the enterprise.

The members of a policy board are 're'n from outside the organization and exercise a collective supe.vision over it and give advise both the minister concerned, on the one hand, and the management, on the other. Any one, who is considered to have a contribution to make to the progress of the enterprise, he may be civil servant or entityet memanar.

The UPSRTC, has been operating buses all over the State. The number of buses playing on the route was nearchoute 6,500. It is highly desirable for it to provide prompt and efficient service to the people of the state. Only well-organised management would enable the UPSUTC to fulfil these remirreness. Like other entercrises in the State, the Corjoration also is managed by a Board of Directors. Its main function are policy making, glving direction of their executives and exercise sufficient control over the working of UPSRTC.

The nationalised transport services have been rur for whout 40 years in the State. Before 1972, it was working as a Departmental uncertaking and after 1972, it is being run as a corporation named UP State Road Transport Corporatic Before 1972, when it was running as a Government Roadeays, its general administration was under the charge of transport commissioner. All major decision to carry out by him. Government road trans, ort policies used to be taken on behalf of the government by the Manadana Board.

In UDSATC, we find a mixed form of functional and policy board. Smet. Nears Yadava is an example of such type of re-presentation. On the other hand most of the persons are from outside in the organisation and treir main responsibility i. to provide a collective supervision to the organisation.

The Board had been consisting of the minister of transport as Chairman and Chi-f Secretary, Finance Secretary and Deputy Secretary transport and Transport Commissioner as members.

This type of board was successful in taking quick and prompt decisions. The presence of transjout commissioner in the board also ficilisted this coordination between the boar and executive man-generat. But, with the increasing pressure of Planning Coemi siton and to extract the institutional financing one the shortage of Gunda, with the state government for implementing the 'togrammes of notionalisation, the government decided to convert the departmental pattern of undertaking into a statisticity corporation.

The overall control of the corporation has been vested in a Board of Directors constituted in accordance with the provision of Road Transport Corporation Act 1950. The Act refrains from laying down the minimum and meximum members and proportion of official and non-official members to be annointed.

After h ving an idea of functions and powers of Board of directo. s, let us describe and analysis the various aspects related to governing Board of the corporation under the followin; sub-head:

- (A). Composition of Governing Board,
- (B). Pattern of appointment of board members.
- (C). Size or board,
- (D). Tenure of board members and
- (E). Board meeting and Responsibility of Directors.

(A). COMPOSITION OF GOVERNING BOARD:

It has been rightly observed by Manson that "you cannot decide how to compose the board of nationalised corporation until you have previously decided, what the functions of the board are going to be.

In URBATC the functions of the board started with an advisory and representative board. The board of URBATC is mainly a representative board. It has larger number of members who are from various concerned departments of state government representing their interest in the organisation. The board of URBATC as per Articles of Association of the Corcoration.

(B) PATT:RN OF APPOINTMENT OF BOARD MEMBERS

In India, the Public Enterprise selection board has been entrusted by the government to recommend the names of suitable personnel for the appointment to the post of (a) Pat-time Ch. irman (b) Chairman-cum-mancign director (c) full-time functional/executive directors on the board of PEs. Part-time non-official directors are appointed by the concerned administrative ministry without reference to any suitable body, generally minister in-charge is following the practice to appoint the part time non-official directors with the prior consent of the board.

In UDARC two-third members were appointed by the state government and one-third members were appointed by the central government. If we analyse the history of appointment in governing board of corporation, we find, the during certain priod change in board have been made very frequently. So far as the post of Chairman was Mr.V.K.Shahni in 1985-86 and Mr. V.K.Khatter in 1986-87. Its reason is the Chairman would U.P.Q.vernment Secretary, department of transport as per provision of Articles of Association.

(C) SIZE OF BOARD

As Prof. Henson has described the principles regarding size of board. The first principle is that the board should not be so large and hetrogenous as to make the decision making process slow and difficult. The large board ten s to divide into fraction. In United Kingdown we regard some-thing

between 8 to 12 members as the ideal size whether the board is a policy or functional kind. In France, they originally had 18 members on the Board of Coal Gas and Industry, composed on the tripartive principle, six representative of State, six of the customers and six of the workers. This figure was later reduced to twelve as 18 members board was considered too bio.

The second principle is that six of the board should be large enough to enable some variety of knowledge and experience to be r-presented on it.

In U.P.State Road Transpot Corporation, maximum number of members on the board of Corporation including Chairman is twelve (12) as per UFSRTC notification No.2869/30-2-432. 7.58, dated 3ist. May.1972.

(D) TENURE OF BOARD

According to Articles of Association of Corporation, one third directors who are liable to rectize by rotation are supposed to seek retirement every y-ar, directors appointed by cov rnor of Uttar Froddsh and nominees directors from Bank and directorial institutions are not liable to retire by rotation. Similarly, there is no ascertained rule for removal of Managing Directors and Chairmen as they are appointed or removal by the G v-tnment of Uttar Predeah. In case of UPSRTC the member tenure will be for one year from the date of assumption of office and they were entitled for reaprointment. It is notable this all the official members have been appointed in ex-officio capacity and on part-time basis, ex-cept Chairman of the Corporation. The Chairman has be a working as Chief-Executive of the corporation on fall time basis, No access consible for

the policy formulation and execution of policies is the responsibility of managing directors. Prior to appointment of Chairman on full time basis, general manager worked as Chief-executive.

The Lord of directors his power to appoint, bus drivers, conductors, clerks and servants for personant temporary or special service. It may also determine the powers of duties of various personnels and can fix their salaries and enollments. It may also remove, suspend or terminate the staff as well as officers.

(E). BOARD MUZITING AND RESPONSIBILITY OF DIRECTORS

If the Choirman is also Chief executive, a distinction must be mide between two responsibilities. A Cheirman not only presides over the Board's meeting, but has to make sure that Board is provided with adequate information to comprehend the matter which comes before it. He should also use his experience to draw out directors' role to the decision and maintain effective relations between the Governing Board and the executive management. As Chief executive, he is responsible to carry out the policies and programmes formulated by the board. In this way, he has to play dual role - one coordinator as well as administrator and second in the Operational behaviour of the enterprise. ONGANISATION OF USENCE.

It is quite worthwhile to make a study of the organisational structure of UPSRIC. Thit would help us in understanding the overall position and picture of various executives in the organisation, their rights and cuties and the relationshir that subsists among them.

At the tog is the Managing Director who is responsible for the effective administration of the corporation and execution of policies. In his duties, managing director is assisted by Additional General Manager, Superintending Engineer, Societary, Chief Security Officer, Chief Accounts Criticer and Deruty Manager (Seneral)-Cotors, Development, Personnel),

The additional Genoral Manager is responsible for the organisation of '0' and 'M', div.aion, supervision of workships and recruitment for the post of gazetted officers. In this work he is essisted by Deputy General Manager (Operations). Deputy General Manager (Operations) is responsible for traffic and operation of regional and sub-regional management. In this work he is assisted by Mastel. General Manager (General).

Deputy General Manager for mechanical Engineering is responsible for the management of engineering branch and also for purchases of velicles. In this work, he is assisted by Asstt. general Manager (Mechanical Engineering). The Joint General Manager for Administration and Personnel is responsible for the supervision of headquart rs est blishment and recruitment Cell. For this, he is assisted by General Manager Operation, Regional Manager for rules and Senior Law Officers.

Administrative Orfi er is assisted by Labour Weifare Officer and Police Relation Offi er, Suprrinendant Sm.inear is responsible for the construction of offices, depots, and other workshops. In this work he is assisted by the Executive Smineers. The Sorretary is responsible for the secitarial work, like meeting, prep ration of spends and other secretarial works.

The Chist security Officer is responsible for the overall sedurity measures at various levels and investigation of enquiries. In this work, he is responsible by Security Officers (I) and Security Officer (II).

The Chief Accounts Officer is responsible for the work related to budget, finance accounts and audit etc.

For this, he is assisted by Deputy Chi: Accounts Officers for Budget, Dejuty Gilef Accounts Officer for Accounts. There are several accounts Officers and Finance Officers who have been appointed to assist these officers.

The de uty General Manager for Storenis responsible for the purchase o: spare parts, tyres, tubes and other materials. He is also responsible for districution of these materials and inventory control. In discharge of his duties he is assisted by additional rools officers.

The De uty General Manager for Development is responsible for overall development of corporation. The De uty General Manager (Personnel) is responsible for recrutiment, training of employees, promotion, demotion and management Gevel _ment, etc.

The overall position and clear cut picture of executive managerial set up of UPD-RTC may be observed from the chart on the next ..ge-

If we study the organisation chart of UPSRTC we find that overall organisation structure of UPSRTC is satisfactorily decentralised.

> The corporation has been divided into Four Zones-(ii) East Zone

(1) Northern Zone

(iii) Middle Zone (iv) Western Zone.

One Deruty General Manager is appointed in each Zone, Zonal Deputy Manager is the overall in-charge of the zone. In this work he is assisted by Regional Manager and service Managers.

CHART OF ZONE LEVEL

S.N.	East Zone (Region)	WEST Zone (Region)	North Zone (Region)	Middle Zone (Region)	
1.	Allahabad	Dehradoùn	Bareilly	Lucknow	
2.	Azamgarh	Meerut	Nainital	Kanpur	
3.	Varanasi	Aligarh	Tanakpur	Jhansi	
4.	Gorakhrur	Agra	Moradabad	Faizabad	
5.	-	Gh.ziabad	-	-	

Before 1986-87, the corporation was divided into four Zones and 18 Regions. There was 110 depots in the State. But after 1986-87, the obrporation had decided to divide it into zones and Regions only. Every zone will have four to five regions, as it is clear by chart of Zone level. There are 17 Regions in the State. A Regional Manager is deputed to take

care of his region, with the help of station-in-charge as well as foreman (See Annexure 4-B). There are III total number of automobile workshops with corporation and every stationin-charge is re.ponsible for the operation of fleet with the help of his assistant, viz. drivers, conductors, clerks etc.

Thus, we find that the gover ing board of UBSKCC is not yet fully professionalised. More and more efforts should be made to infuse the professionalism it. So far as the executive management is concerned, there is a lot of room for improvement. Rosently, efforts have been made to bring about professionally trained personnils for its lower level management. Pur better performance, it is quite necessary that a Memorandum of understanding should be signed between the Government, on the one hand, and the management of the corporation, on the other, so that more autonomy may be given to its management. But that would also make the management accountable for the agreed performance.

CHAPTER V

LONG TERM FINANCIAL MANAGEMENT OF UPSETC

LONG TERM PINANCIAL MANAGEMENT OF UPSRTC

The adoption of socialist pattern of society as the national objective, es well as need for planned and rapid development, require that all industries of basic and strategic importance or in the neture of the public utility services, should be in public sector. The state has assumed direct responsibility for the future development of business over a wider area. The number of new enterprises and the range of their size and of variety may give an idea of the man-gement problems involved. Fublic undertakings also face problems in securing menagerial prisonnel of high quality. In beginning most of the managerial prisonnel in these undertakings come from dow_remem Dep_trements end not from the industrial and commercial fields. This made it difficult for them to procur, the services of persons well-versed in management skills.

Financial memagement refers to that part of managorial activity which is concerned with the planning and controlling of the firms financial resources. As a separate managorial activity or discipline, it is of recent orgin. It has not yet acquired an unique body of knowledge of its own. It has been drawing heavily on economics for its theoretical concepts. The subject of financial management is still developing and it has, even now, certain areas where controvercing exist for which still there is no unanimity.

It has been rightly stated that finance is life blood of business. Its role, has gained im ortance at a faster rate

in the modern money economy. The time and extent of the availability of finance in any organization dictates the destiny of all business activities. It is occase, now a days, the operations of business are carried on at a very large scale.

James G.Van.Norne rightly stated that "overall then finance oncept has clanged from a primarily descriptive study to one that encompases rigorous analysis, from a field that was concerned primarily with the procurement of funds to one that includes the management of assets, the allocation of capital and the valuation of the firm, as a whole and from a field that emphasised external analysis of the firm to one that strasses decision making within the firm today a best cherecterised as ever new ideas and techniques. The role of financial manager is consider bly different from what it was few years ago and from what it will, no doubt, be in another coming years. Academicians and financial managers must grow to accept the changing of environment and its challenges."

Hence it is clear that in the changing environment, financial management is a part and parcel of public sector menagement. Financial management is directly concerned with production, marketing and other function of public enterprises assuming the management of financial resources of state enterprises assuming special significance involved, accessed the leadershing role expected to be played by state units within the frame work of a mixed economy.

⁰¹⁻ James, C.Van, Horne, Financial Management and policy (Edition III) Standford University, P:ge 9.

The method of financing of statutory Corporation is generally indicated in their relative statutes. The financial adviser cum Chief Accounts Officer heads the financial and adcounts division. The financial division performs three types of functions. They are:

- (1). Functions relating to financial a visor ship, when the financial adviser cum Chief Accounts Officer acts as a counsel and a guide of management;
- Functions pertaining to financial management as cost accounting, reviewing cost audit, instilling cost conciou ness and controlling inventory,
- Routine accounting functions as payment of bills, maintenance of proper accounts books, proper upkeep of cash, preparation of final accounts etc.

In public enterprises, unlike other functional heads, the financial addisor is ar ointed by the government. He has the right to report differences, if any, with the Chief Executive.

The financial management has to make appropriate financial decisions in such a way as to maximise wealth of shareholders. The important decisions which are made, may be summed up under the following heads-

- (A). Capital Budgeting or Expenditure Decisions,
- (B). Capital structure decisions,
- (C). Profit/Divident allocation decision.

(A). Capital Expenditure (Budgeting) Decision:

Capital budgeting decision may be defined as the firms decision to invest its current funds most efficiently

in long term octivities in anticipation of an expected flow of future benefits over a series of years. Definite guidelines have been framed by the government of India within the frame-work of which public enterprises, particularly after 1962, have to make capital expenditure decisions. They are:

- Certsin powers are delegated to the Board of Directors to incur capital expenses,
- (ii). An early preparation of detailed project report is strongly recommended. Feasibility reports of a project are already prepared before any financial commitment are made,
- (iii). It is necessary to ensure that the authorities sanctioning the projects have before them a statement showing the extent of the investments actually made.
- (iv). The need for the preparation feasibility studies was p-ritcularly emphasised, since it was realised that delays in foreign aid utilisation were primarily due to the dearth of self conceived projects, moreover, before any inv-stment proposal is made for external assistance, feasibility at dy must be un artaken after investigation. The feasibility study should ensure the project on the following aspects-
 - (a). Demand analysis
 - (b). Pricing.
 - (c). Technical development of project,
 - (c). Froject cost estimate,
 - (e). Profitability analysis,
 - (f). National economic benefits, and other.

(B). CAPITAL STRUCTURE DECISION:

The capital requirements of public sector enterprises are largely financed by government, specially in gestation period. However, the major emphasis in policy decision bearing on capital structure has been an adherence to a particular equity-debt ratio as well as the terms on which government can provide loans, Until June, 1961, when it decked equity-debt ratio rate 50:50. The government did not have any clear policy in regard to equity-debt ratio. After 1961, various committees that examined this i. sue observed that there cannot be one common ratio engically to all the undertablings.

B.S.Shurma, analysed his observation on capital structure of public sector projects in India in

- (i) In gestation period,
- (ii) In op rating period (iii) In expansion period.
- According to him, during the gestation period the government offers loan on terms which are fairly flexible.

During the operating period the size of working Canital grows Continuously.

During the expension period there are no properly constituted systems of fin notal planning.Internal resources cannot be diverted into expansion and government has agreed to relax the norm of 50:50 equity-debt ratio.

(C). PROFIT ALLOCATION DECISION OR DIVIDEND DECISION:

Profit allocation or dividend decisions belong to critical area of financial management which brings into operation the conflicts of int rest between management and share-holders and also between one group of shareholders with another. Nam factors have to be kept in view will determining divident policy, such as, nature of earnings, reinvestment alternatives, out flow of cash, working capital position, new capital requirements, market value of share and the position of share holers etc. It is not possible to analyse all these-fctor in cetail here.

PACTORS DETERMINING FINANCIAL STRUCTURE WITH REFERENCE TO UPSRTC

Financial structure refers to the make up of the permnent capital of the compen, There is no such thing as the model capital structure for all business enterprises. There are common characteristics that seem to typify certain industries. For instance, public utilities are typically he virily leveraged with debt and preference sharres as compared to the manufacturing concerns. As a metre of fact, the terms financial structure are interchangeable. The capital structure decision is a continuous one and has to be taken when wer a firm needs additional finances. It is often suggested that a capital structure should be determined which can maximise the long run value per ordinary share in the market, demerally, the following factors should be considered whenever a capital structure decision has to be taken.

- (1). Trading on equity
- (ii). Capital gearing iii). Cost or c-pital
- (iii). Cost or c-pital (iv). Maximum control
 - (v). Cash flow ability of the company
 - (vi). Flexipility and
- (vii). Size of the company.

The slove f ctors, will be discussed, one by one, with special reference to U.P.State Road Transport Corporation in the following pages.

(1). TRADING ON EJUITY:

Meaning-

Generally, borrowing is paculiar to short-term finance, but one of the main reasons for a long-term borrowing is financing by fixed assets. After the term debt is backed by fixed assets of the enterprise. The debt financing as the main policy of the enterprise is associated with the concept of trading on equity. The trading on equity is a device to earn higher earnings on the .hare cepital of the company. Till menterprise uses borrowed capital in the require conduct of business with a view to earning more on it that what it pays in the form of interest, it continues to rorrow profitably. If borrowed funds are used with this object, the company is said to be trading on equity. The intensity of trading on equity can be measured by the following two ratios-

(A). Debt-Equity Ratio-

The cabt equity ratio shows the relative contribution of owners and long-term creditors. To colculate this ratio the figure of total deb.s im divided by net worth, the ratio can be expressed as turn-over or as percentage-

Long-term debts to equity Ratio =

Long-term debt

Equity Capital + Reserves and surplus

(B). Coverage of Fixed-Charges Ratio-

This denotes the factor of safety i.e. The extent to which earning can decline without causing embarrassment to creditors and prefirence share holders in respect of payment of interest and dividend. The figures

of profit before inter st and taxes are divided by interest $\boldsymbol{\ast}$

Coverage Interest Payment Ratio =

Earning before Interest and Taxes

Inter←st.

Trading of equity of UPSRTC-

The to:al c-pitel inverted in UPSRTC shows a continuously increasing trend. The total capitalinvested in UPSRTC has been increasing from Rs.69.27 Cro:es in 1975-76 to Rs.428.25 in 1987-88 (Upto Dec.1987). If we analyse the table No.5-1, we find that the equity base has been increasing from 21.7 % in 1975-76 to 36.3 % in 1987-88, whereas proportion of loan has declined from 42% % in 1957-6 to 20% in 1987-88.

The proportion of internal sources in total capital has also changed. The internal resources in 1975-76 was Re.25.19 cores, which is the 36% of the total invested capital. It increased in 1987-88 to Re.189.60 crores, which was 44% of total capital invested.

It is clear from the table No.5-1, that the total borrowed capital has always been more than the equity c-pital. In fact, if we see the table it may be seen that it has been nearghout double in comparison to equity. In table No.5-1, we findthat the debt-equity ratio was 1.94 : 1 in 1975-76 and it further increased to 2.02 : 1 in 1976-77. But after 1976-77, the debt-equity ratio in almost 1:1 after 1979-80 to 1985-86, which is generally the accepted norm for public enterprises in India.

The debt equity ratio is almost 50 :50 after 1979-80 whereas internal resources occupy a significant proportion in the total ceptical structure. "t is clear from the table No.5-1:

.108.

Note- * Net loans = Total Loans - Refunded loans
The data after 1979-80 are not certified by
Auditor General.

It may be seen from table No.5-1 that the internal resources occupy a significant proportion in total o-pital structure. This shows the prudent and conservative financial policy adopted by UP State Road Transport Corporation. Because the State Government look upon the corporation as a creators of new w-alth and expected the corporation to yield resources for financing the Five-Year Plans. The U.P.Govt. has also felt that financing for expan-ion should be taken as a specific obligation of public attemptiess as well as URSRCC.

(11). CAPITAL- GEARING:

The proportion in which different form of securities are to be issued, is decided on the basis of policy decision regarding cyltal gearing. The ratio of ordinary shares to preference share capital and loan capital is described as the "apital Gearing". A highly geared capital isone which has a small proportion of equity capital including any reserves. If the larger proportion of total capital is made up of equity capital is called to be 'tow qeared'. Thus, capital gearing is not only important to the company but also prospective investors. The otherratio by which cypital gearing is calculated is as under-

Preference capital + Debentures/Loan to equity Capital %

It may be seen from table No.5-1 that the internal resources occupy a significant proportion in total c-pital structure. This shows the prudent and conservative finencial policy adopted by UP State Road Transport Corporation. Because the State Government look upon the corporation as a creators of new walth and expected the corporation to yield resources for finencing the Pive-Year Plans. The U.P.Govt. has also felt that financing for expan-ion should be taken as a specific obligation of public enterprises as well as UFSRTO public enterprises as well as UFSRTO.

(ii). CAPITAL- GEARING:

The proportion in which different form of securities are to be issued, is decided on the basis of policy decision regarding c-pital gearing. The ratio of ordinary shares to preference share capital and loan capital is described as the "Capital Gearing". A highly geared capital isone which has a small proportion of equity capital including any reserves. If the larger proportion of total capital is made up of equity capital is capital to be "Low geared." Thus, capital gearing is not only important to the company but also prospective investors. The otherratio by which capital gearing is calculated is as under-

Preference capital + Debentures/Loan to equity Capital %

Capital Gearing and UPSRTC

As on 1st. June, 1972, the Government Roadways was converted in UPSRTC to bring efficient and autonomy in

services of activities of transport services. The U.P. Government had placed at the disposal of the Cofporation Rs.12 cror s as a equity capital. The State Government did not contribute any amount from 1973 to 1975-76. But Capital structure of UPSATC has been sound since 1976-77 whereas the internal resources occupy a significant proportion in the total capital structure. A low gearing trend may be seen in the capital structure of UPSATC. It shows the prudent and conservative financial policy adopted by governing board of the corporation.

It may be seen from the table No.5-2 on next page-

Source- Compiled with the help of Annual Report of UPSRTC

The data after 1979-80 are not certified by Auditor General.

It may be seen from table No.5-2 that the Corporation's capital ye_ring is as per norms suggested _y the experts of financial management. The table shows that after 1976-77, the U.P.Govt. contributed equity capital every year to UPSRTC. This contribution shows an increasing trend of capital gearing. The total capital of contribution of U.P.Govt. amounted Rs.12.00 ctores in 1975-76 which increased to Rs.118.70 croses in 1987.88.

Similarly, the central government contributed Re.3.00 ... was in 1975-76 as equity capital. After 1975-76, the Central Convernment has contributed continuously out the Contral Convernment has contributed on the Contribution does not show an increasing trend. The contribution of Central Convernment has increased from Re.3.0.07 on Re.1.2.06 crores in 1981-82 and R.20.73 crores in 1984-85. The total contribution of Central Government to the corporation was Re.3.6.56 Corres at the end of 3181-Docember, 1987.

The internal resources also increased. The total reserves (including depreciation) was Rs.25.19 cr. in 1975-76 and which has increased to Rs.159.6 cr. at the end of year 1987. But the tenders of the corporation has a decreasing trend. At is very good situation of financial structure as well as capital gearing. Its reason is, the State Government is toking more interest to improve working of UPGATC. So that it may provide more fewlities to the public of the state.

(iii), Cost of Copacal-

The term cost of rapital, generally refers to the interest or diviêr... payable. The cost of capital is an important concept in formulating a firm's capital structure. According to P.Modiallani and M. Hamillor.

"The average cost of capital to any firm is completely independent of its capital structure and is equal to the capitalisation rate of pure equity stream of its class. This mean that the cost of capital is carning per share (E/P) and it does not change with copinge in the debt-equity ratio and it is the same for all finance alternatives, assuming no taxes".01

Capital inform of shares or debentures has to be attracted and then maintgined in the business. It means that the interest payable in case of loan on the sharecapital invested. The total cost of maintaining loan and share capital should be kept to the minimum. So it is necessary for alternative capital structures to be compared.

There are many lax alternative of external resources to obtain the finance of any enterprise such as debts capital, issue of preferentical shares and equity shares, reinvestment of retained carnings, etc. Some formulas are given here to calculate the cost of capital in case of each type of capital-

1. The tost of Debt Capital

Here, c. = Cost of debts

i = Annual interest payable

T = Rate of Tax

R = Rate of Interest.

2. Cost of preferencial shares-CP = PD x 100

Here, CP = Cost of preferencial shares PD = Total amount of preferencial dividend NP = Net product of share.

⁰¹⁻ F.Modigliani and M.H.Miller, "The cost of capital, Corporation Finance and the Theory of investment", American Economic Review, June 1958-Page-268

3. Cost of equity share capital Ce = EPS x 100

Here, Ce = Cost of equity share capital EPPS= Earning per whore NP = Ket product of share.

It is not ble that the cost of every kind of capital cannot be equal, some resources are costly while others are cheeper. It is necess ry for the financial managers to choose the balanced alternative of resources for the composition of balanced capital structure, because any company either in form of small or large scale cannot collect its financial resultrements through one resource only.

COST OF CAPITAL AND UPSRTC

As a matter of fact, there are many sources to finance the capital requirements and which one of the alternative arrangements is the best, depends upon government policy for the public corporations. The public enterprises can not issue shares and debentures to the public, obtain loam from public or can not easily approach bombers and financial institutions to finance their cypital requirements.

In case of UP-NRTC, the State Government as well as Central Government have contributed equity capital in ratio of 3:1 respectively. The Corporation is paying interest to both the state and Central Government. The Corporation has received loans from the various financial institutions from time to time and rate of interest is nearabout equal of all institutions. Mence the valuation of cost of capital is nearabout constant and it has depended on the firmncial policy of government, yet the interest pay ble to government and financial institutions is increasing. It may be seen from the following table No.5-3 on maxt page-

STATEMENT SHOWING THE PERBLE INTEREST ON CAPITAL AND LOANS.

	STATE GO		CENTRAL			in lakhs)
Year.	Interest payable	Interest paid.	Interest payable	Interest Paid.	Financial Institutions	TOTAL (2+4+6)

Note- The data after 1979-80 are uncertified by A.G.U.P.

Source- Compiled with the help of Annual Report of UPSRTC and Budget Section of UPSRTC.

It may be seen from table No.5-3 that the total interest payable in 1975-76 was Re.75.00 lakhe, which increased upto 161.31 lakhs in 1980-81 and Re.280.17 lakhs in 1982-83. It shows an increasing trend of pay ble interest after 1984-85 to 1986-87, but it decreased in 1987-98. The total interest payable by the corporation was Re.306.94 lakhs for the year ended 31st.December 1987. The lighest interest payable was in year 1986-87. It may also be notable that the Corporation paid interest to Zetate Government from time to time. In 1979-80 Corporation paid interest of Re.161.31 and there was no balance of interest which remained unpaid to the State Government at the beginning of year 1981-82. The Corporation paid interest of Re.250.00 lakhs in 1985-86. After 1986-86, no plyment of interest has been made by the Corporation.

Similarly, interest on capital contributed by Central Government shows the same position as the State Government. Inter- st payable to Central Government also shows an increasing trend from 1975-76 to 1986-87. The total interest payable to Central Government was Rs.58.21 in 1975-76 and Rs. 101.71 in 1985-86. It also decreased in year 1987-88. There was only Rs.13.14 lakhs interest payable for the year ended 31st.December, 1987. The Corporation has tried to pay payable interest regularly year by year, so that the burden of interest may not increase and financial position of the Corporation may be strong, but the Corporation is unable to pay all the balances of payable interest to the Central Government. The Corporation has paid Rs.25.00 lakhs in year 1975-76 and Re.166.63, Rs.120.00 lakhs in year 1976.77 and 1977-78, respectively. The Corporation has paid Rs.250.00 lakhs in the year 1983 and 1986.

The interest on ebt has also increased it may be seen from table No.5-3. The loan provided by financial institution to the Corporation has increased every year. The payable interest on loan to financial institutions was Rs.75.07 lakhs in 1975-76 which increased upto 1977-78 we decreased in 1978-79. The highest payable interest was Rs.1001.59 lakhs in 1984-85. There was a balance of payable interest for the year ended 31st Dec.1987, amounted Rs.1000.49 lakhs.

Though the Corporation refunded loans from time to time to financial institutions yet the burden of interest payable to financial institutions was increasing continuously.

A picture of receipts and payment of loans by the Corporation to the various institution may be seen from the Table No.5-4, given on next page-

Balance payable

It may be seen from the table No.5-4 that the receipts and payments of loans by Corporation was as under at the ended of 31 Dec.1987

1-	State Government-			Rs. in Lokhs.
	Total losn Receipt		3963.46	
	- Amount Refunded	-	3763.46	
	Total Balance payable		200.00	
2.	Life Insurance Corporat	10n c	of India.	
	Total loan =	=	2579.00	
	Less refunded	-	22 1140.60	
	Balance payable	= Rs.	1438.40	
3.	Industrial Develorment	Bank	of India-	
	Total Loan	as .	10,056.96	
	Less Refunded	=	3,801.85	
	Balance payable	w#3•	6,255.11	
4.	Loan from other Institu	ution.	9-	
	Total loan	-	1653.05	
	Less Refunded	=1	1207.81	

Note: The calculation of receipts and payments of loans have been made from 1st. June 1972 to 31 Dec. 1987, between the operation period of UPSRTC.

445.24

It may se seen from the summary of loans payble to the various institution that it was Re,8338.75 Lakhs (200,00-1438.40+ 0.6255.11 4445.24) at the end of 31st Dec.1987 which is nearabout 55% of total equity capital of USERC.

It is also clear that the role of these institutions has been quite significant. The share of total borrowed capital by Financial Institutions are 63% while the Govt_{1,5}%n_{5,6}%1,5% of to-

(IV) MAXIMUM CONTROL AND UPSRTC.

"The issue of ordinary share involves the problem of maximum control. To the extent that the additional issue of ordinary share is made to new shareholders as against the existing shareholders, there is a dilution in the control of existing share holders. On the other hand, tho debt issue and preference share alternative do not effect the control of existing group, because the preference shareholders may have a right to eloct a minority of directors in the event of lapse in dividend payment." OI

The correct bilince between the voting espital or equity capital and loan capital should be maintained but the ideal ratio is difficult to determine. Some accountants may take the view that the absence of loans is a sign of great strangth, wile others may argue that the existence of loans is an indication of growth and profitability. Many growing companies often choose to borrow ruther than to sail equity shares due to fear of the risk to management by wider mublic holding or woting countral.

In case of UNBRC, it may be sen from the composition of governing Board of U.SETC, the more pow r has been given to the bureaucrats nominuted by Central as well as State Government, against Corporation's mominoe directors. Due to this the planning for financial control is affected by these bureaucrats.

⁰¹⁻ Kuchhal, S.C., Financial Management (An analytical and conceptual approach), Chaitanga Publishing House, University Road, Allahabud, Chapter-Planning of Capital Structure, Page-570.

(V) CASH-FLOW ABILITY

To obtain a balanced capital structure, one has not only to Consider the factors of income, cost of capital, and maximum control but also the cash-flow ability of the company. One of the features of a sound capital structure is conservation, which does not mean employing no debt or small amount of debt. Conservation is relited to the fixed changes created by the use of debt of preference capital in the capital structure. In case of UPSTRC, the cash flow ability is not quite sound because the cash flow ability of the corporation is very critical and complex.

(VI). FLEXIBILITY

Flexibility means the capacity of the business and its management to adjust to the changes in circumstances. Flexibility is one of themost serious consideration in the realm of capital structure. The capital structure of a firm is flexible if it has not difficulty in changing the capitalisation or sounces of fund. The company should also be in a position to redeem its prefernce capital debt whenever warranted by the future conditions. Nost financial executives prefer to hold some of their debt capacity in reserve. They have provided for a certain sources of funds on which they can lay their hands quickly when the unexpected need suddenly present itself.

In case of UNSMIC the Corporation has no such type of flexbility, because it is depended upon the financial policy of government. Although there are some sources in the hand of Corporation's management yet they are not in a position to use their rights for the financial flexbility.

(VII) SIZE OF COMPANY-

The size of company generally influences the availability of funds from different sources, A small company finds great difficulties in reasing long-term loans. Even if it is oble to obtain some long-term loans it might be available at a high rate of interest and in convenient terms. The highly restrictive conditions of loan agreements in case of small scale corporation make their capital structure veryinflexible and management can not run busines. Freely without any interfrence.

In case of UPSRTC, the aim of the Corporation to provide adquate and confoctable transport facilities to the persons of the State and functioning on a no-profit-no-loss basis. All the financial requirements are met by the state and Central Government, either in form of equity or debt capital. Though the Corporation is authorised to cen loan with any scheduled Bank, yet complete security of Government finencing fails to create the necessary financial discipline in UPSTC.

The size of company generally influences the availability of funds from different sources, A small company finds great difficulties in relaing long-term loans. Even if it is able to obtain some long-term loans it might be available at a high rate of interest and in convenient terms. The highly restrictive conditions of loan agreements in case of small scale corporation make their capital structure veryinflexible and management can not run business freely without any interfrence.

In case of UNSRTC, the aim of the Corporation to provide adequate and comfortable transport facilities to the persons of the State and functioning on a no-profit-no-loss basis. All the financial requirements are met by the state and Central Government, either in form of equity or debt capital. Though the Corporation is authorised to (es) loan with any scheduled Bank, yet complete security of government financing fails to create the necessary financial discipline in UNSAC.

RATIO ANALYSIS OF UPSRTC.

We may analyse the financial state of affairs of UPSRTC with the help of recognised ratios, as a tool for analysis. These ratios help us in understanding and compaining the developments. In fact, ratio analysis is "the process of determining and interpreting relationship based on financial statement." Ratio analysis is a useful indicator of performance of a concern and thereby examine the efficiency and performance of management in carrying out the operation."

Before, we compute the ratios connected with the UPSRTC, it would be quite useful to explain the relevant selected ratios. They have been explained briefly as follows:

(1). Structural Group-

Under structural group, there can be four Ratios analysis-

(A). Funded debt to total capitalisation-

This ratio is computed by dividing funded debt by total capitalisation. It can be expressed as percentage. There is no any hard and fast rule can be set-down o to what a proper relationship spould be, but earning power of a company may instified a higher recentage.

(B). Debt to equity:

This ratio is computed by dividing total liabilities by equity share capital including reserves and surplus, if any. The higher this ratio the less the protection for creditors.

(c). Net fixed assets to funded debt:

This ratio .ives an indication of the extent to which equity capital is invested in net fixed assets. A Ratio of 2 : 1 would mean that for every rupes of long term indebtness, there is two rupess of net fixed assets.

(d). Funded debt to net working capital-

This ratio is calculated by dividing the long term debt by the amount of net working capital. Funded debt should not exceed net working capital.

(2). LIQUIDITY GROUP:

Under this group, there are two ratios analysed-

(a). Current Ratio-

Current ratio is computed by dividing current assets by current liabilities. This ratio is generall an acceptable measure of short term solvency. A current ratio of 2 : 1 has Been been considered generally satisfactory.

(b). Acid-test-Ratio-

This also termed as quick-ratio. It is determined by quick assets i.e. (cash, investment and debtors) by current liabilities. A quick ratio of 111 has usually been considered favourable.

(3). PROFITABILITY GROUP:

Under this group, there should be four ratios for analysed-

(a). Operating Ratio-

It is calculated by dividing the total operating expenses by net sale and expressed as a percentage.

(b). Net Profit to Sale-

It is determined by net income after taxes to net sales for the period and measure the profit per runce of sales.

(c). Coverage of Interest payment Ratio-

This ratio is determined by dividing interest charges on long term borrowings by interest. This ratio is used mainly as measure of the firm's ability to interest.

(d). Return on Investment-(ROI)-

It is very important ratio to examine the relationship between the size of operating profit and capital employed. For calculating this ratio the cost of borrowed capital and income tax are deducted from earnings.

calculated as(1). EBIT (Earning before Interest & Taxes).

Capital Employed

(ii). Net Frofit after proference dividend. Net Worth.

(4). Turnover group-

There are three ratios included in this group-

(a). Assets turnover = Not sale Net fixed & Current Assets.

A high ratio suggested management ability to make good use of its tangible assets.

(b). Net Working Capital turnover Ratio:-

It is calculated by dividing not sale by not working capital. A very high ratio may signify dangerous situation of shortage of working capital.

(c). Inventory turnover—

It is c_0 louisted by dividing cost of goods

sold by ending inventory. Inventory turn-over is a valuable measure of selling efficiency and inventory quality. A low inventory turn-over may be due to a variety of reasons, like poor merchandise, over valuation of closing inventory etc.

RATIOS ANALYSIS OF UPSETC.

Let us undertake the ratio analysis for judging the financial performance and position of UPSRTC. The most important ratio to analyse the profitability of any concern is Return on Investment (ROI). From this point of view, we may first study the return on investment of UPSRTC on other relevant ratios. The total investment of UPSRTC is increasing continuously, while the return on investment is decreasing. Other total investment of UPSRTC was Rs.25.97 crores for the year 1972-73, whice it increased to Rs.225.81 crores at the date of 31 Dec.1987. It may on seen from the toble 5-5 given on next page-

TABLE No.5-5STATEMENT SHOWING THE RETURN ON INVESTMENT IN UPSRTC.

Year.	Total Invested Capital.	c	ross Profit.	0	of Profit n total apital Before nterest)	0	R. in Crore of Profit n capital After ntcrest).
1975-76	35.43	+	0.80	+	8.16	+	2.28
1976-77	43.55	+	1.21	+	8.61	+	2.78
1977-78	42.35	-	0.36	+	5.99	-	0.85
1978-79	49.77	-	2.48	+	3.27	-	4.99
1979-80	60.00	-	3.28	+	1.12	-	5.46
1980-81	75.28	-	18.26	-	17.16	-	24.26
1981-82	85.43	-	12.90	-	6.83	-	15.10

Source:- Annual Report of UPSRTC, Lucknow.

Note:- Data after 1980 are uncertified by A.G.U.P.

It may be seen from table No.5-5 that UPSRTC has been suffering losses, except in 1975-76 and 1976-77. The losses have been increasing from Rs.0.36 Crcr s in 1977-78 to Rs.17.52 crores in 1985-86. The loss shows the increasing trend except 1981-82 when fares were increased twice in a year. In 1981-82 the fare of buses had increased upto a hike of 40% This resulted in reduction of loss to Rs.12.90 Cr. But further increased to Rs.21.52 Cr. in 1982-83 and Rs.16.64 Cr. in 1983-84. The highest loss suffored by the Corporation was Rs.22.39 crores in year 1984-85. After suffering losses for a long period the Corporation gained a profit of Rs.2.52 Cr. in 1986-87 and Rs.391 Cr. as on 31 Dec.1987.

The return in investment was positive only in 1975-76 and after then it was negative. The highest return on investment was negative in year 1980-81. But it has been positive in year 1988-87 and 1987-88. When Corporation gained some profit.

If we see the table, and analyse the ratio of Return on Investment, it can be easily said that the rosition of earning capacity of UPSRTC is very dangerous for the short and long-term creditors.

(1). CURRENT RATIO ANALYSIS OF UPSRTW.

As we have defined, the current ratio attempts to measure the ability of a firm to meet the current obligation or the liquidity of business. The liquidity position of UFSRTC may be seen from the table No.5-6 given on mext page:

TABLE No.5-6

STATEMENT SHOWING CURRENT ASSETS AND CURRENT LIABILITIES OF UPSRTC

		(R	s, in Crores)
Year.	Current Assets.	Current Liabilities.	Curfent Ratio
1976-77	4016.98	3946.70	
			1.02 : 1
1977-78	4790.29	3806.80	1.26 : 1
1978-79	3638.70	3104.38	1.17 : 1
1979-80	3438.17	3258.69	1.05 : 1
1980-81	3495.94	3337.10	1.04 : 1
1981-82	3549.94	3540.10	1.00 : 1
1982-83	3593.98	3595.45	0.99 : 1
1983-84	5698.97	6917.90	0.82 : 1
1984-85	7683 • 97	9086.77	0.85 kg 1
1985-86	9001.24	10277.90	0.88 : 1

Sources: - Compiled from Annual Reports on public enterprises of U.P. and Statement of Affairs of UPSRTC. 1995-86. As indicated earliter, the current ratio of 211 indicates sound liquidity position of the concern, which is quite helpful in dl. charging current liabilities without any difficulty. However this standard is not achieved in practice In case of USBRTC we find that the best possible liquidity situation prevailed during 1977 to 1980-81, when the current ratio was 1.02 : 1, 1.25 : 1, 1.17 : 1, 1.05 : 1, end 1.05 : 1 respectively. It declined 1.00 : 1 in 1981-82, 0.99 : 1 in 1982-85 and further increased in 1985-86 The current ratios ol UpsRTC in 1985-86 was 0.88 : 1. The management of UPSRTC must make efforts to keep the liquidity position sound. Because it is not quite satisfactory from 1981-82 to 85-86 as may be seen from table no.5-65.

(2). Quick or Acid Test Ratio-

The Acid-Test Ratio is a more severe and stringent test of a firm's ability to meet current obligation. It supplements the current ratio. It is shown as -

Current liabilities,

"A firm have a quick ratio of 1:1, where this is not, so a substantial" cash-hedge "is usually maintained. Because this ratio is calculated by curfent assets less stock after dividing by curr. nt liabilities, so it is accessary for us to analyse the stock position of UPSRTC, before analysis of Acid test ratio.

ANALYSIS OF STOCK

. The position of stock of UPSRTC $m_\theta y$ be seen from the table 5-7 given on next page-

.132.

TABLE NO.5-7

ANALYSIS OF STOCK OF UPSRIC

					_	(Rs. in Lakhs)	khs)		
Particulars	1977-78	1978-79	1977-78 1976-79 1979-80 1980-61 1981-62 1982-83 1983-84 1984-85 1985- 1985,	1980-81	1981-82	1982-83	1983-84	1984-85	1985

SOUTCE: Compiled from, "Handbook of U.P. State Public Sector, Enterprises, Various Annual Reports of U.P.S.R.T.C. and Statement of Affairs of UPSRTC 1985-86".

It may be seem from table No.5-7 that stock of spares parts and tools show.d an increasing trend except in 1979-80 and 1982-83. It was Rs.888.50 lakhs in 1978-79, while it increased upto Rs.1241.51 lakhs in 1984-85 and Rs.1311.90 lakhs in 1985-86. Jimilarly, the amount of Work-in-progress also showed an increasing trend. The amount of Mildiam material showed a decreasing trend. The amount of Mildiam material showed a decreasing trend. The amount of Wile. was Rs.245.27 lakhs in 1977-78 and increased upto Rs.2688-42 lakhs in 1985-86. The amount of Buildiam material was Rs.819.57 lakhs in 1977-78 while it decreased Rs.5.82 lakhs in 1980-81 There was no any st ck of Buildiam materials in years 1981 to 1983. If we calculate the proportion of stock to total assets, it is fairly high. We would discuss it in the next Chapter i.e. working caphtal management of UFSRTY.

(Source: Compiled from Statement of Affairs of UPSRTC and
Annual Report on Public Sector Enterprises of U.P.

The general and recognised standard for judging the quok or acid-test ratio is that it is taken to be satisfactory if it is 1:1. But, in practice, we do not find this standard in most of the concerns. In case of UPSNTO, the table No.5-8 shows, the liquidity position of Corporation was satisfactory in 1977-78, 1978-79 and 1979-80, when quick ratio was 0.84 : 1, 0.53 : 1, and 0.65 : 1 respectively, In 1983-84, it has fairly lower and it changed from 84:1 in 1977-78 to 0.40 : 1 in 1983-84. In 1984-85 and 1985-86 it again increased.

CHAPTER- VI
WORKING CAPITAL IN UPSETC

CHAPTER- VI

WORKING CAPITAL IN UPSRIC :

INTRODUCTION :

capital may be broadly classified into two categories, fiz., Fixed capital or Long-term capital, and working capital. We have already discussed about Fixed capital in the fifth chapter. In this Chapter we would discuss about the working Capital with special reference to UPSRTC. Before analysing, the working capital management of UPSRTC, it would be necessary for us to understand the meaning, importance and size of working capital.

Working capital is required in every business concern for meeting day-to day expenses. It has been rightly stated that "The amount invested in current assets like raw materials, work in progress, finished goods, debtors, bills receivable, temporary securities etc.; cash and bank balances held for meeting routine expenditure is regarded as Working Capital or Current Capital, In a way it is a capital meant for short-term end is used for meeting, current labilities in the ordinary course of business".

Working capital is classified into (a) gross working capital and (b) net working capital. Net working capital

is the difference between current sasets and current liabilities while Gross Working Capital is the total of the current assets or that amount of funds invested in current assets employed in the business process. The concept of net working capital helps the management in looking forward for permanent sources of its financing.

The problem of working capital management can be examined under two sub-heads viz.-1 internal financing and external financing.We would be examing the internal financing aspect, which deals with determining the size of working capital in particular business.

TYPES OF WORKING CAPITAL :

There are mainly four types of working capital used in the business conderns. They are as follows:-

(1) PIXED OR FARMAN BYT WORKING CAPITAL :

Permanent working capital is the minimum amount of current assets, which is needed to conduct a business even during the dullest season of the year. In other words, which is required at all times during the life of an enterprise. In a way it is permanently sunk in the business, like fixed copital which should

not be converted into cash in the normal course of business. Such minimum portion of working capital which becomes a fixed investment in current assets can be acquired through long term funds. The shount of purmanent working capital could be varies from year to year, depending upon the growth of a commany.

(2) SEASONAL WORKING CAPITAL :

Seasonal working capital is also called fluctuating or variable working capital. Seasonal working capital refers to the rest of the working capital remaining after the deduction of fixed working capital from the total working capital. It is of a temporary and variable nature and can be financed through short-term funds. A portion of this becomes significant during certain season as in certain business amounts the need for current assets varies from season to season.

(3) SPECIAL WURKING CALITAL :

The special working capital refers to the amount of lunds required to meet unforescable contingencies, for example huge funds are locked up on

inventories and book debts during slumps. Extra capital may also be required for meeting special orders.

(4) CASH WORKING CAPITAL :

Cash working capital is one which is calculated from the items appearing in the frofit and less account. It shows the real flow of money and is considered to be the most realistic approach in working capital management.

IMPORTANCE OF WORKING CALITAL :

Adequate working capital is as essential for business enterprise as adequate circulation of blood for human body. Lack of working capital creates many problems. For instance, fixed assets remain idle or underutilized. Failure to provide adequate working capital, is sure to prove as a very cost blunder in financial planning, Hence, working capital is regarded as one of the canditioning factors in the long run operation of a firm, Provision of sufficient working capital proves benificial in several ways which are as

 Goodwill of the Enterprise due to prompt payment of liabilities.

- (ii) A greate, capability to the enterprise to explicit business opportunities like special orders, purchase of raw materials on concessional rates etc.
- (iii) Reduction in the cost of producing goods due to purchase of materials at better terms.
- (iv) Possibilities of successfully during the financial solvency of the enterprise.
- Possibility of making regular dividend payments prompthy and others.

The importence of working capital in any industrial concern, therefore, need not be over emphasised. The existence for an edequate supply, carefully administered, can make substancial differences between the success and failure of an enterprise. Even in a well established business with a long history of successful operation careful attention to the management of working capital can result in greater profitability. It is important therefore, for management to pay particular attention to the planning and control of working capital.

FACTORS DETERMINING WORKING CAPITAL :

The need for working capital varies with changes in the volume of business. A considerable proportion of of ourrant assets is needed permanently as fixed assets. Nore than one production cycle may be in process at one and the same time for, a subiness operates on a cuntinuing basis. The corporate management has to consider the various factors in making decision regarding balances. Working capital is affected by the crise-crossing economic current flowing about the business. The nature of firms activities, the availability of materials, thanness of money market and others, are all part of these effecting forces of working capital. However, the following factors as suggested by Prof. J. Prakesh determine the amount of Working capital.

(1) NATURE OF INDUSTRY :

The composition of an assets is a function of the size of a business and the industry to which it belongs. Small compenies have smaller proportion of cash, receivable and inventory than large corporations. The difference becomes more marked in large corporations. A public utility concern for example mostly employs fixed assets in its operations, while markendise departmental depends, generally, on inventory and receivables. Thus, working cepital depends u.on the nature of an enterorise considerally.

(2) DEMAND OF CREDITORS :

Generally, creditors are interested in the security of loans. They want their obligations to be sufficiently covered. They want the amount of security in assets which are greater than liability.

(3) CASH REQUIREMENTS:

Cash is one of the main items of ourrent assets, which is essential for the successful operation of a production cycle. Cash should be adequate and properly titlized. It would be wasteful to hold excessive cash. A minimum level of cash is always required to keep the operations going. Adequate cash is also required to maintain good credit relations, hence, cash requirement also determines the size of working capital.

(4) GENERAL NATURE OF BUSINESS:

The nature of business is an important factor which determines the level of working capital. They relatively lower in public utility concerns, in which inventories and receivables are rapidly converted into cash. However, the manufacturing organisations, face problems of slow turnower of

inventories and receivables and invest large amount in working capital.

(5) TIME FACTOR :

The level of working cepttal depends upon the time required to manufacture goods. If the time is larger, the size of working capital will be larger, worever, the size of working capital depends upon the inventory turnover and the unit cost of the goods that are sold. The greater this cost, the higher the amount of working capital.

(6) VOLUME OF SALES :

. This is the most important factor, effecting the size and composition of working capital. A firm maintains current assets because they are needed to support the dejartmental activities which result in sale. The volume of sales and the size of the working capital are directly related to cash other. As the volume of sales increases, there is an increase in the investment of Working capital.

(7) INVENTORY TURNOVER :

If the inventory turnover is higher the working

capital requirements will be lower. With a better inventory control, a firm is able to reduce its working capital. It should determine the minimum level of Stock Which it will have to maintain throughout the period of its operations.

(8) RECEIVABLE TURNOVER :

It is measured to have on effective control of receivebles. A prompt collection of receivebles and good setting facilities for payable result into lower working capital, requirement.

(9) BUSENESS CYCLE :

Business expends during the period of prosperity and declines during the period of depression. Consequently, more working capital is required during the period of prosperity and less during the period of depression.

(10) VALUE OF CURRENT ALLETS :

A decrease in real value of current assets as compared to their book value, reduces the size of the working capital. If the real value of current assets increases, there is an increase in working capital requirements.

(11) CREDIT CONTROL :

Credit control includes such factors as the volume of credit sales, the terms of credit, sales, the collection policy stc. A sound credit policy is possible for a firm to improve its caphflow and effects working capital.

(12) LIGUIDITY AND PARMITABILITY :

If a tim desires to take a greater risk for bigger gains or losses, it reduces the size of its working capital in relation to its sales. If it is interested in improving its liquidity it increases the level of its working capital.

(13) INFLATION :

As a result of inflation, aire of the working capital increase in order to met requirement of the market. To some extent, this may be compensated by increasing the selling price during the period of inflation.

(14) SEASONAL FLUCTUATIONS:

Seasonal fluctuations in sales effect the level of variables working capital. Often the demand for

products may be of a seasonal nature. Yet inventories have got to be purchased during certain season only. The size of the working capital may be bigger than in other periods of year.

(15) PROFIT PLANNING AND CONTROL:

The level of the working capital is also decided by the management in accordance with its policy of profit planning, and control. A firm has to plan for a payment of taxes, which are an important part of working capital, management. Often the dividend policy of a corporation may depend upon the amount of cash available to it.

(16) CASH RESERVE :

It would be necessary for a firm to maintain some cash reserve to enable it to meet contingency payment. This would provide a buffer against abrupt shortage in cash flows.

(17) OPERATIONAL AND FINANCIAL EFFICIENCY :

Working Capital tumover is improved with a better operational and financial efficiency of a firm, A greater working capital turnover, would he reduce its working capital requirement.

(18) CHANGE IN TECHNOLOGY :

The technological developments related to the production process, have also a sharp impact on the need for working capital.

METHODS OF ESTIMATING WORKING CAPITAL REGUIREAENTS

Many business concerns have come to grief on account of inadequate working capital and many business units have suffered due to excersive provisions of working capital. For efficient management of working capital, it is necessary to ensure that it has not been circulating in excess nor it should be allowed to fall below a particular level or business operations. Therefore, it is necessary to keep a proper balance between there two extremees.

There are two methods, which are generally followed, in determining working capital requirement. They are as under :-

- (A) Conventional Method
- (B) Operating Cycle Method.

(A) CONVENTIONAL METHOD :

According to conventional method cash in flews and outflows are matched with each others.

(B) OPERATING (WORKING CAPITAL) CYCLE METHOD :

The operating Cycle is the length of time between a companys paying for materials entering into stock and receiving the influws of cash from sales. The determination of operating cycle is helpful for control proposes with a view to improving working capital ratios.

MEASUREMENT OF WORKING CAPITAL :

Working capital balances are measured from the financial data. Generally, the working capital balance of a going concern has a positive value but often uses of working capital exceed the sources of working capital exceed the sources of working capital in certain periods. Changes in balances can be measured in rupes amounts and also in percentages by comparing current assets, current liabilities and working capital over a given period.

RATIO ANALYSIS OF WORKING CAPITAL:

The ratio analysis of working capitalcan be used

by management as a means of checking upon the efficiency with which working capital is being used in the enterprise. The most important ratios for working capital management are as follows:

(A) Turnover of Working Capital for a Certain period = Net Sales

Average Net Working Capital

(B) Current Ratio =

Current Assets

Current liabilities

(C) Current debt to tangible net worth =

Current liabilities

Tanyible Net Worth

The above ratios have already been defined in Chapter No.5.

WORKING CAPITAL MANAGEMENT IN UPSRTC :

As we defined earlier in the chapter, Gross working capital is the total of all the current assets, while net working capital is the excess of current assets over current liabilities. (Current assets are those assets which, in ordinary course of business, will be turned into cash

within a short time. As against these, the current liabilites are those liabilities intended at their inception to be paid in ordinary course of business within a reasonabely a short time (normally within a year).

For any financial mamajer, effective mamajement of working capital is a difficult problem. We find similar situation prevailing in UPSRTC also. Working capital need of UPSRTC has been increasing rejularly. It may be seen from the following table No. 6-1

TABLE NO. 6-1
Working Capital of UPSKTC

(Rs. in lakhs)

Years .	Current Assets	Current Liebilities	Net Working capital
1977-78	4790.29	3806.80	983.49
1978-79	3638.70	3104.38	534.32
1979-80	3438.17	2285.69	1152.48
1980-81	3495.84	2337.10	1158.74
1981-82	3549.93	2540.00	1009.93
1982-83	3522.01	2463.17	1058.84
1983-84	5681.96	3683.80	1998.16
1984-85	0683.98	5005.93	2678.05
1985-86	9001.24	5817.81	3183.43

SOURCE : Compiled from Annual Report of UPSKTC Note : (Provision Liabilities are not included in current liabilities). It may be seen from table No. 6-1, we find that the current assets of UPSKTC increased continuously from 1979-80 to 1985-86. In previous two years it showed a decreasing trend. The current assets of UPSKTC was Rs. 4790.29 Lakhs in 1977-78, while it decreased to Rs. 3638,70 lakhs in 1978-79. But in year 1979-80, it again increased, The amount of current assets was Rs. 34 38.17 lakhs in 1979-80 and Rs. 3495.04 lakhs in 1980-81 and Rs. 3522.01 lakhs in 1982-83. At the end of March 1986, the current assets of UPSKTC increased upto Rs. 9001.24 lakhs. There was an increasinj and decreasing trend of current assets of UPSKTC.

The current liabilities of UFSRC was Re. 3806.80 in 1977-78, which decreased to Rs. 3104.38 lakhs in 1978-79 and also showed in a decreasing trend upto 1982-83. The amount of current liabilities was Rs. 3683.80 lakhs in year 1983-84 and after 1983-84 it again increased to Rs. 5005.93 Lakhs in 1984-85 and Rs. 5817.61 lakhs in 1985-86. Hence, it is clear that there has been a fluctuating trend of current liabilities in UFSRC.

After analysing the current assets and current liabilities of UPSRTC, we find that the working capital was Rs. 983.49 Lakhs in 1977-78 and decreased to Rs.534.32 lakhs in 1979-80. An increasing trend was found from 1979-80 to 1981-82. But after 1981-82 it went on decressing. The working capital of UFANTC was Rs. 1158.74 in 1980-81 and Rs. 1009.93 in 1981-82, Rs. 1058.84 lakhs in 1982-83. The working capital of UFANTC showed an increasing trend after 1982 and continuously increased to Rs. 3183.43 Lakhs at the end of 31st March 1986. The working capital turnover is improved due to better financial efficiency of UFANTC.

REASONS FOR SUCH INCONSISTED GROWTH RATE IN NET WORKING

- (1) Constent increase in current assets in all years except 1980-81 at inconsistent rates.
- (2) Current liabilities too had net shown consistent growth trends except 1994-85 and 1985-86 as the current liabilities considerably increased in the years 1984-85 and 1985-86.
- Increase in current assets was mainly due to frequent changes in spares and tools and constructional materials.
- (4) Fluctuations in current Liabilities were mainly due to frequent changes in cash credit arrangement with

Banks, which played a very important refe in financing the working capital.

GROWTH OF BUSINESS AND MURKING CAPITAL IN UPSRTC

The growth of business of a particular concern depends upon its output, sales, employment opportunities, capital structure etc. But specially in service industries Just like UPSHTX, in a very ordinary sense, growth in a business can be measured by ascertaining growth in sales and services.

According to S.C. Kuehhal, "As a company grows, it is logical to expect that larger emount of working capital will be required. Though it is very difficult to draw up firm rules fur the relationship between the growth in the volume of a company's business and the growth of capital in a going Concern also shifts with economic circumstances and corporate practices, growth industries require more working capital them those that are static, other thing being equal."

The growth of business and working capital in UPSRTC has been measured by computing 'Rultiple Correlation' between net working capital and sales in terms of servides.

and cost in terms of expenditure.

Nultiple correlation is a measure of combined relationship of two or more dependent variables with the independent variable. The iormula for calculating coefficient of multiple correlation is :-

Where =

- x = Correlation
- X m Dependent variable
- Y' = Independent variable
- Z = Inde, endent variable

For the purpose of this study the net working capital is the userndent variable and sale in terms of services and cost in terms of expenditure are independent variables, or.

- X = Net working capital
- Y = Sales in terms of services
- Z = Cost in terms of expenditure

	Y X X-X (In come) [Expd.) (Netw.c.) (dx)	Z [Expd.)	X (N etw.	x-x .c.) (dx)	dx 2	(4 <u>7</u>	ą _y 2	Z-Z (qz)	dz ²	å x å

2255

Years- 1965- and

Solution =

Average of
$$x = \frac{Ex}{n} = \frac{12768}{8} = 15.96$$

Average of $y = \frac{Ey}{n} = \frac{89832}{8} = 112.29$

Average of $z = \frac{Ex}{n} = \frac{101656}{8} = 126.82$

$$x (x \text{ and } Y) = \frac{\text{Ed } x \text{ dy}}{\text{dx2 } x \text{ dy}^2} = \frac{1825}{600.7} \times 6462.1$$

$$x (x \text{ and } z) = \underbrace{\frac{gd \times dz}{d \times 2, dx^2}}_{\text{doff}} = \underbrace{\frac{2255}{600.7 \times 9692.3}}_{\text{0.94}}$$

$$x (Y \text{ and } z) = \frac{Edy.dz}{dy^2 dz^2}$$
 $\frac{7796}{6462.1 \times 9692.3}$

$$xyz = \frac{x^2 x y + x^2 xz - 2 x x y, x x z, x y z}{1 - x^2 y z}$$

$$= \left(\frac{1}{6},93 \right)^{2} \left(.94 \right)^{2} - 2 \left(0.93 \right) \left(0.94 \right) \left(.99 \right)^{2}$$

$$= \left(.99 \right)^{2}$$

. 0.93

CORRELATION COLFFICIANT = + 0.93

Thus it is quite clear that there has been a very high degree of positive correlation, positive correlation refers to the movement of the variables in the same direction.

Considering the coefficient of correlation as + 0.93, the net wirking calital of UPSRCC was highly effected by the Dicome and the cost in terms of expenditure.

PROBABLE ERROR :

Probable error tells us the limit within which the various values of the coeffect of correlation of the various samples taken out the same group or the entire group will vary. If the coefficient of correlation is less than the probable error, the "x" is the insignificant". If the coefficient of correlation is more than six times to probable error, the correlation is decisedly significant. If the co efficient of correlation is more than three times but less than six times, the relationship is considered to be significant. Probable error of x is computed in the following manner " 1

As:hana, B.N., Elements of statistics VII edition ps 'o-291, Chaitanya Publishing House Allahabad, 1976

Probable Error 'x' in UPSETC

Probable error
$$x = 0.6745 \times \frac{1-x^2}{n}$$

Probable Error in UPSKIC

$$= 0.6745 \times \frac{1-0.93^2}{8}$$

$$= 0.6745 \times \frac{0.065}{2.83}$$

m 0.018

Hence Probable error if x in UPSRTC is less than six times, and relationship is considered to be significant.

If we analyse the coeffecient on the basis of above norms supposted by Frof. B.W. Asthane, in case of UFSKTG, the size of net working capital was very significantly dependent upon sales and services.

ADEQUACY OF WORKING CAPITAL IN UPSRTC :

There is standard measurement to Judge the adequacy of working capital, Nowever, it can be judged in terms of its relation with firms debts. Generally, current ratios and quick ratios are studied to establish such relationship. The ratio of current assets to Gurrent

liabilities is known as working capital ratio or liquidity ratio, Current ratio is an index of the condern, while acid test ratio fefers to proportion of firm's current debts and liabilities and the liquid part of firm's current assets.

Current ratio is computed by dividing the total current assets by the total current labshilties. This ratio shows the number of times the current assets are able to pay current liabilities. A current ratio of 2:1 is considered as satisfactory. However, the size of Wor. king capital depends upon many factors, as we have mentioned earlier, hence a common current ratio can not be treated as optimum for all types of bissiness-industrial and trading concerns.

"Current ratio measures the past, it can not measure the future salvency of the firm. If all current assets were liquidated in order to meet firm's obligation the firm would have no working capital to carry on its operations.

Current ratio analysis of UPSRTC have already been undertaken in former Chapter i.e. Longt-rm financial management of UFSRTX, Here, we would analyse only the

adequency of working capital of UPSKTW.

TABLE - 6-3

Note : based on Table No. 5-6

On the analysis of the working capital of UPSKAC, we find that it w has been inadequate during all the years from 1976 to 31st March 1986. Its reason is that the UPSKAC require heavy investment infixed capital and has

a low operating cycles. This corporation is having long gestation period, As it is a service industry, hence its working capital requirements is comparatively lower than a commercial enterprise. It gets working capital funds from the government, financial institutions and not by issue of its shares among the public. Therefore, the corporation intends to maintain a very low margin of safety to liquidate shortterm obligation and face much problems in reising funds. It is clear from table no. 6-3 that size of working capital was inadequate during all the years and the corporation did not maintain optimum level of working capital.

FUND FLOW ANALYSIS OF WORKING CAPITAL IN UPSRTC :

Fund flow analysis is an effective management tool to study how funds have been procured for the business and how they have been employed. The statement of variations in working capital is based on the same approach and is used for the preparation of funds flow statement. This technique helps in analysing the changes in working capital between two dates. The comparision of current assets and current liabilities, as shown in the balance sheet at the end and at the beginning of a specific period, shows changes in each type of current assets. In

other words, it shows the sources from which working capital has been obtained,

NATURE OF SOURCES OF PUND :

The following changes representing sources are :

- (a) Decrease in assets by sales, depriciation better control of inventory and debtors, reduction in cash balance;
- (b) Increase in liabilities by addition to current liabilities and provisions, increase in long term debts issue of debenture.
- (c) Increase in net worth- by retention of earnings, iesue of addition shares, etc.

The following changes showing the uses of funds are :-

- (a) Increase is assets, pilingup of sundry debtors addition to investment,
- (b) Decrease in liabilities, as pay off a long or short term loans, reduction or creditors.
- (c) Decrease in network, increasing of losses divident payment in period of no or low profit etc.

In case of UPSRTC the changes of working capital is clear through the fund ofiow analyses, It may be seen from the following statement, of comparative balance sheet for the ended year list warch 1985 and 1986,

UTTAR PRADESH SLATE HOAD TRANSPORT CORPORATION BALANCESHEET AS ON 31 MARCH

	R	s. in Lakh
Capital and liabilities	31.3.86	31.3.85

	4708.73		4708,73

It may be seen from table no. 6-4 that thinl increase in liabilities of 31st March 1986 over 1985 was Rs. 4708.73 lakks as sources of funds and similarily the total increament of ersets included net deficiency was Rs. 4708.73 in UPSRC.

If we analyse the changes in net working capital for the same period, it will be necessity for us to prepare refined statement of sources and uses of funds in UPSRTC for the period.

TABLE No. 6-4 A

Refined statement of Sources and Uses of Funds

Rs. in lakhs

,, Increase in loans	1139,86	
,, Short term deposits	4.92	
add Provision increase	471.89	
Interest payable		
Sundry creditors	1191.13	

It may be seen from table No. 6.4 A., that the net working capital for the year 1986 was Rs. 592.32 lakhs, which was must than th to f 1985. If we analyse the calculation of net working capital shown in the statement, it is clear that the decrease in net working capital is due to difficiency in revenue for the year 1986. Another factor which has effected increase in net working capital was long terms loan taken by UPSRC for the year ended 31st March 1986 as cash crevit and public up usits etc. The devit Lalance of interoffice adjustment also effected the net w.rking capital in UPLATC, which amounted to Rs. 326.68 lakhs for the belances of deltors building materials. Morking-pourses

and total balances or spareparts increased during the some period. All these factors effected the net working capital in UFSMCC. The net working capital for the period was Res. 592.12 Lekha's as clear in table No. 6-44.

STRUCTURAL DETERMINANTS OF WORKING CAPITAL IN UNSERTE :

Current end putch ratios indicate the reletionshipbetween the irrms courent liabilities and current assets. But these ratios do not assess the management of the compoments of current earest. Mance, it is necessary for us to analyse the main structural determinants of working capital in U.P. State houd Transport Comporation. Generally, cash, inventories and in equivables are the main determinants of working complet).

INVENTERIES :

Inventeries are treated as the most important single current assets in the assessment of working capital. Inventory may be defined as the goods held for regale by the firm Inventory, generally includes raw materials tools and spareparts, workin-progress (current) and finished goods stock.

Inventories, measured by rupee value, constitute the major element in the working capital in business undertak-

ings. Control of inventories is often most important problem in the management of capital. Because, excessive investment in inventory, in relation to requirement, will not only affect the cash cycle badly but also the liquidity position of firm, In contrast, lack of inventory may edversaly effect the production activities of the firm. A firm, ther fore is required to maintain the optimum level of inventory. The financial expects suggest that inventory must be maintained at Economic Order quantity (E.O.O.) level K.O.O. suggeste that inventory level is potimum, where total inventory cost is minimum and when order and carrying cost of inventory is equal.

"There are several factors which influence the amount of funds that a firm has invested in inventories at a particular time. Various processes directly effects amount of investment. The munagement ability to predict the forces that may clouse disruptions in the flow of inventories such as strike and demand fluctuations."

The size of inventory and their percentage to total current assets of UPSRIC may be seen from the following table No. 6-5.

-168-

TABLE NO 6-5 Statement sharing the size of inventory in UPSRTC

(Rs. in lakhs)

Year	Total Current assets	Inventory	% of inventory to total C.A.
1977-78	4790.29	1989.69	42%
1978-89	3638.70	1317.54	36%
1979-80	3438.17	1958.17	57%
1980-81	3495.84	2035.94	58%
1981.82	3549.93	1969,93	56%
1982-83	3522.01	1987.01	57%
1983-84	5681,96	3646.34	64%
1984-85	7683.98	3865,14	50%
1985,86	9001.24	4044.23	45%

Source: Data Received from UPSRTC, Accounts Deptt.HO. Lucknow.

It may be seen from above table no. 6.5, that in the year 1977.78, the percentage of inventories was 42% to total ourrent assets, which decreased in 1978-79, but after 1978-79, the percentage continuously increased except in 1985-86. Hence, it may be seen from table that, the inventories represented more than half of the total

renged between 35 per cent to 50 per cent in same years. Therefore inventories were found to be the largest single component of current asset as it is clear from above table.

OTHER CURRENT ASSETS IN UPSRTC :

Besides inventories, the UvSRTC had also invested a part of its fund to acquire few more current assets. These assets are: accounts receivables, cush, shortterm investment, loans and advances to staff and others etc. These assets for the purpose of working capital may be seen from the table No. 6-6.

	statement of financial performance of UPSATC year 1985 and 1986,	financial	performan	ce of UPS	ATC year	1985 and	1986.	

Itemwise position of working capital in UFSRIC may be seen from the table no. 6.6. Following inferences can be drawn from the table no. 6-6.

- Debtors of UPSKRC increased from 1983-84 to 1985-86
 the total cebtors for the year 1983-84 was Rs.1535.00
 lakhs while it increased to Rs. 3281.59 Lakhs in
 1985-86 which was neurabout 29% of total current
 assets. It is also clear that the total webtors
 effected net working capital substantially.
- 2. The stock position also showed an increasing trend the amount of work-in-progress was Rm. 245.27 in 1978-79 while it continuously increased to ks. 2081.83 Rm. 2628.42 lekh in 1984.85 and 1985.86 respectively. Similarly, the amount of spare parts also showed an increasing trend except in 1981 and 1982.83. Total spare parts were Rm. 485.30 lakha in 1978.79 while it increased to Rm. 1241.51 lakhs, Rm. 1311.89 lakhs in 1984-85 and 1985-86 respectively. But the cost of building material showed decreasing trend. Total stock position during ell the years was near about 50 to 60% in range to total current assets. It is not working to the norms of stock to net working capital as advised by finencial experts.

3.

Total investment in cash by UPSRIC during all those years was near about the norms suggested by Gutheman and Danuaii.

Outhemen and Deugail have suggested that "Business firm should kee, its cash and near cash reserves below the requirement of one month normal expenditure. If cash and near cash reserves halpence to be more than this limit it should be taken for granted that excessive cash is being carried by the "Contration or firm".

5. Total loans and advances given to its staff, were really in large amount.Total advances taken by stuff was Rs. 399.32 Lakhs in 1978.79 while it decreased to Rs. 233.56 Lakhs in 1979.80. Although the advances showed a decreasing trend yet it neglected the norms of advances to total net working capital Because loans and advance are also in the category of near cash reserves hence, if we add the cash and near cash reserves in terms of loans and advances. It not according to the norms suggested by Guthemban and Daughter. Hence, the investment in cash was not found to be satisfactory in UNSKYC.

CHAPTER VII

A CRITICAL APPRAISAL OF FINANCIAL PERFORMANCE OF UPSRIC

INTRODUCTION :

Sound financial management is pre-requisite for any business enterprise however, financial performance, as desired, depends upon variety of factors Walker has rightly stated that "The core of the financial management is planning and co-orientation. As finance touches almost all the functions of business and all business decisions have financial implications, the efficiency and success of the business lie in co-ordinating all such production and distribution functions and decisions. Of

The objective of financial planning is to secure and employ capital resources in the amount and proportion necessary to increase the efficiency of remaining factors of production. It helps to management to avoid waste. It is the primary duty of the management to plan inflow and outflow of dunds. The most importent aspect of financial planning is to plan stage fore starting the project and at later stage for expansion.

Walker, Ernest W. and Baughan, William, Financial Planning and Policy, Harpet & Row New York, 1964, Page-4.

The problem of appraisal requires laying lown suitable standards of performance and of indicating yardsticks to assess how actual performance compared with what is estimated. For a proper appraisal it is essential that government make a general statement of policy of the financial and other obligations of the various public enterprises. It is as necessary to formulate the financial framework for each enterprise as it is to prevent unfair criticism of enterorises in the public sector.

To make a feir assessment of the working of the public enterprises, it is important to draw a line of democration between the responsibility of the management and the Government. Government exercises a variety of controls over a public enter, rises and the management has to function within the framework of these controls. It will thus, be fair to judge the performance of the management in the light of these constraints on its actions, It has been rightly stated that the performance of a public enterprise should be evaluated in the term of success achieved by the management is the following spheres and in the order indicated below s-

- Furthering of the non-commercial objectives of the enterprise as specified by the Government.
- (ii) Furthering of the connercial objectives of the

enterprise and maximisation of profits subject to above.

- (iii) Improving the quality of products and services and
 - (iv) Effecting economy and efficiency in the use of resources as men, materials and money".

To a certain extent, there is inter dependance between some of the above criterie. The test of profitability has been put second to that of the fulfilment of non-commercial objectives, since public undertakings are xyxxted to be run in the collective interest outer than mere profit. Hence, return on investment (ROI) is not an adequate measure for judging the performance of public sector undertakings.

For the proper functioning of any enterprise, it is essential that the management lay emphasis on measuring the efficiency of its operations. Such undertaking myst have an adequate apporatus for regularity exercising efficiency control. The principal elements of such an efficiency control system consist of performance-budgetion cost secontion, material management are.

A distinction \mathbf{p}_{p}^{had} to be made in evaluation of the performance of private sector enterprises to those of

nurlic enterprises. And, it has been Mightly emphasised that " In judging the performance of public enterprises it is important to bear in mind certain features which distinguish them from the enterprises in provate sector. Though they are enjoined to observe business and commercial principles, the profit motive can not be such an overriding factor in their case, as it is in private enterprises. For example location of project in backward areas or operations of domestic air services on uneconomic routes indicate that public enterest rather than profit motive is the directing factor. Public sector undertakings also face problems in securing managerial personnel of high quality. In beginning most of the managerial personnel in these undertakings came from government Departments and not is from the industrial and commercial fields. The terms and conditions of service in these undertakings had to bear a relation to those prevailing in the Government Department".

This made it difficult for them to procure the services of persons well-versed in management skills.

FINANCING OF CAPITAL

There are many sources and arrangements to finance the capital requirements, which one of the alternative arrangements is best, depends open operational circumstan -ces, ownership and nature of the capital requirement. Incase of private undertakings besides internal sources, they can approach various money and capital market for financing the capital. The private enterprises can issue debentures, showes and can accept loan from financial institutions, deposit and loans from public.

The public enterprises normally do not issue shares to the public and ontain loan from them. Directors of public enterprises can not easily approach with bankers and financial institutions to finance their capital requirements. Moreover, the Government has got the ultimate power to determine the source of financing the capital. The public enterprises can not easily make use of its internal sources because during the initial period of the enterprises, internal sources are not available and for public enterprises gestation period is very high. Namce during gestation period no internal fund except depreciation is available to finance the capital. Moreover, once a public enterprise starts earning profits, the method of appropriation of profits totally depends upon the Government's policy.

Prof. Kuchhal has stated that " The surplus expected from public enterprises as a source of funds has assumed a great importance, with the rise in investments in public sector during five year plans. Surplus means the balance of resources expected to be available with the enterprise after providing for operational charge, normal replacement. interest payments and dividends*01

FINANCING OF CAPITAL IN UPSRTC :

The authorised capital of the comporation is not clear but the paid up capital upto 1986-87 stood at Rs. 14,471.32 lekhs. All the shares are owned by the state and Central Governments. The total Government investment in UPSRTC in Rs. 14,671.32 lakhs as on 31st March , 1987, The capital position of the corporation is detailed below in the table No. 7-1.

Kucchal S.C. "Financial Management on Analytical and Conceptual Approach", Chaitanya Publishing House, Allahabad 1982 P. 534.

- Note: (1) Capital employed represents net fixed assets plus working capital.
 - (ii) Net worth represents paid up capital plus reserves and less intangible, assets plus loans.
 - (iii) Working capital indicates gross working capital.

It is clear from the foregoing analysis that the

comporation depends upon Governments policy for supplying capital. The capital has been provided by the Government in the form of equity capital and loan. It is seen that funds available from internal sources have negligible contribution in the formation of assets. The major source of interpal finance is the for depriciation for example in 1965-86 funds amounting to b. 13630 lakhs against &.8308 lakhs in 1981-82 from the intermal resources were willised for gross fixed assets. Reinvestment of depriciation reserve does not provide for growth rather it can be termed as replacement investment. The use of depriciation fund for other than cepital formation or replacement investment is never desirable According to M. Mohistim Such internal sources constitute 28.3% of financing assets formation in public sector, whereas in private sector the ratio is 69.9%. This shows that there is scope for the public sector undertakings for utilising the depriciation fund as replacement investment.

It may be also observed that maximum debt equity ratio maintained by the corporation in 0.95; 1 . The public sector undertakings work under a prescribed

^{01.} Mohshin M. "Pinancial planning and control"

vikas Publishing House New Delhi,

1977 page - 113.

standard of 1:1 on the other hand, private sector undertakings at an average have a debt equity ratio of 3:1 This explains the fundamental difference in their approach in evaluating risk and relating it with the cost of capital. The former Union Finance Minister Nr. H.M. Patel appears to be in favour of a "debt equity ratio of 2:1 for public sector undertakings as the ratio of 1:1 is unrealistic." 01.

The Administrative Reforms Commission has recommended a liberal policy in this respect for all the undertakings". It is suggested that corporation should try to take steps in this direction of having debt equity ratio of a 2; 1 * 02

In private enterprises, the enterpressure seek to establish optimum capital structure with proper combination of debt and equity with a view to minimise the cost of capital and maximise the value of shares. The cost of capital is starting point for profit planning It also serves the basic measure of financial performance. White designing capital structure in public sector, this

^{01.} The Economic Times, Calcutta, August 18, 1977

Administrative Reforms Commission, Report on public sector undertakings, Oct. 1967, pp. 47-48.

capital cost and return factors should be taken into account, Dr. N.Mohishin suggested "Assets should be acquired when expected return exceed cost of funds by a margin to compensate for the degree of risk invalved".

Generally, this standard is not followed and in public sector units capital structure is the result of an adjustment between the enterprise and the Government, It is a compromise without applying any scientific technique. This is, because public enterprises easily get capital from the Government and they are not expected to move in the capital market. In case of UPSRTC, it may be seen from the table no. 7-1 that it get capital from the State Government as well as Central, whenever it approache for the same. Frequent conversion of loan into share capital is a regular feature. Concession in deferring payment of loans and interest is often allowed. Thus everything is so easy that it does not bother for adequate return on capital as is evident from accumulated losses. If the corporation approach the Government for fund for meeting the expenses of new purchases of correct estimate of the cost of equity and expected return on capital.

It is also evident from the preceding table showing capital analysis that the working capital employed in UPSRTC, constitutes, on average 6 months production (service) at cost. "It appears to be excessive and there is need for rational planning of the working capital. An excessive investment in working capital lovers down the productivity as the ration of working capital to fixed capital becomes disproportionate. It should also be kept in mind that under investment in working capital retards the rate of return on capital invested by preventing its role, to enterprise, preparation of a working capital budget ascertaining the future requirement of working capital and necessary plans to mee the requirement is an important task for the management."

It may be observed from the review of the financial position which has been undertaken in the preceding pages that the financial performance of W-SRC, presents a disheartening picture. It has accumulated huge losses. In 1987-88 it earned a nominal profit of 8x.252.17 lakhs for the first time of its existance.

Cost Analysis of UPSKIC

Expension and growth of any undertaking depends on the availability of adequate finance at reasonable cost. Thus upon careful planning and wise handling of

finamoe depends the ultimate success of any enceprise. For menufacturing and selling a product or service werry business has in our costs. Some of these are fixed and other variable. There is a growing complexity of costs incurred by a enterprise in its efforts to attain sales or service volume that can permit a satisfactory level of profits."

This is equally true, in case of public enterprises, no doubt, state enterprises are not generally and necessarily run for making profits but for other considerations like public service and welfare. Yet even the state would not, unless the enterprise is of some special characteristic, he able to run the same under continued losses. The principal test of the efficiency and performance of an undertaking is profit and profit depends upon the sales, services and cost volume.

As Galbraith puts it "If I had to lay down a measure for performance for the publickly owned corporation in the developing country, it would be the earning that it provides to put into its own expansion. They should be growth oriented and should provide resources for development. Thus the important question is whether public enterprises recognise the task of enforcing efficiency

and economy while managing their finances".01

The cost control forms an integral part of management. "The beaic objective of expenditure control all these years has been to limit actual expenditure within the amounts provided in the budget under the several heads and units. The need for the maximisation of tenefits by prudent and economical expending is now greater than ever before".

The cost analysis may be seen from the table No. 7-2.

Source - Compeled with the help of annual report of UPSRTC, Year 1985-86-87.

It may be seen from table No. 7.2 that the various items of cost are continously increasing. The total cost on personnels salary and wage were Rs. 3626.93 lakhs in 1982-83 while it increased to 4092.30 lakhs in 1983-84 and Rs. 5791.77 lakhs in 1985-86. It is to be noted this increase in wages and salary cost was witnessed without may remarkable addition in labour fore. The increase in wages cost was caused by upward revision of the wages and salary of the employees, thus increasing the cost of service and reducing the margin of profit. Similarly, miscellaneous and other trend, which indicates that a lot of capital is locked in this item, which is the symbol of had management, Hence it is suggested that the corporation should be established cost control department for efficient running of its services.

REVENUE ANALYSIS OF UPSRTC :

Although the corporation has been incurring losses due to increasement of Costs yet the revenue earned by it has been increasing steadily.

An attempt has been made for Revenue analysis of UPSRTC through the following table 7-3.

Source - Compkled from the annual reports of UPSRTC H.O. Lucknow 1966-87.

It is evident from the table No. 7.3 that within speriod of two years the income from all sources were near about Rs. 31 Cr. while in the same period expenditure side is faster growth on repairs and maintenance, of the buses and other vehicles which increased from Rs. 2717 lakhs to Rs. 3674 lakhs. It is to be noted this increase in repairs and maintenance was witnessed without any remarkable addition in the capacity of earnings of buses. It is also remarkable that the increase in velfare expenses and maintenance were caused by Catelersmess of staff thus increasing the cost of service and reducing the margin of profit. If the corporation is to earn a profit and wipe out the cosses already accumulated it will have to reduce the margin of capital locked in work-shop. The corporation can also reform its financial position by regularising the services in all routes and

APPRAISAL OF FINANCIAL PERFORMANCE OF UPSRTC :

As we have early indicated that the most important aspect

of financial planning is to plan capital expenditure. Capital is needed in the initial stage for stratting the corporation. The financial position of the WHARCO is summarised here in table No. 7.4 under broad headings for a period of the 5 yr. ending on 31st march 1986.

Source - A hand book of UP state Public Enterprises Sarbajnik Udyam Bureau U.P. 242 Jawahar Bhawan/Lucknow (U.P.), 1987.

It may be observed from the table No. 7.4 showing the financial position of UPSKIC, that its financial position and performance is quite unsatisfactory. The accumulated loss incurred by the corporation upto 1985-86 ammounted to Rs. 7.732 Likhs as against paid up capital of Rs. 36,982 Lakhs. It may also be seen that the expected profitability of corporation is very low and even the moderate expectations have not been fulfilled. Though, the losses of corporation shous a decreesing trend yet the overall position of the corporation was unsatisfactory and the planning section of the corporation should continuously enjage itself in evaluating the capital expenditure, excuting the capital expenditure, excuting the capital expenditure, in the capital expenditure, and efficiency. It may also be seen from table No. 7.1 that the corporation has been depending upon loans as a major

part payable is increasing continuously.

RATIO ANALYSIS :

For judging the financial performance of the corporation it is essential to study some of the important performance ratios which are compiled in the following table No. 7-5.

TABLE NO. 7.5
Statement Showing Performance Ratios of UPSkTa

Particulars	1981-82	1982-83	1983-84	1984-85
Sales & Service to				
capital employed	15%	13%	14%	13%
Net profit to capita	1

wo rth	Loss	Loss	Loss	Loss
Value added to capi	al			
employed	15%	15%	13%	13%
Inventory to sales &	i			
services	24%	25%	28%	27%
Sales to Gross block	14%	16%	14%	15%

Source : Annual Reports of UPSRTC, H.O. Lucknow 1986-87.

It is evident from the table no. 7-5 that the performance ratios of sales and services to capital employed, sales to gross block and value added to capitatal employed all indicte definite improvements in the performance the corporation over all years. However, a comparison with the performance ratios of public sector undertaking of the central government taken as a whole, upts UPSRCO at a low estimation. From the performance review of 121 FES of the central government it may be observed that in 1977-78 the ratio of net profit to capital employed was nearabout 3% as compared to 3% and -13% Similarly, the ratio of gross profit to capital employed was 7.6% as compared to 0.2% and -6% in case of UPSRCO

Thus Judged from any standard, the financial performence and position of UFDMTC, can not be said to be satisfactory. Accumulated losses are sufficient to elemon strate bad planning and inefficent management. The deplorable financial position has been caused of by irregular services, curelessness of staff, employees' unrest, lack of capital high percentage of inventories, lack of comiortable buses, high fraight etc. All these problems have been analysed in this volume in detail at appropriate places in the different chapters and measures have been also successed to early a these

-195-

6.	No. of Employees	48562	47862	47779	47668	49564
7.	Bus staff ratio	10.58	9.38	9.32	8.60	8.25

Source: "Compiled from 'A Hand book of U.P. State
Bublicsector Enterprises" Sarvajnik Udyam
Bureau Uttar Pradesh Lucknow (U.P.)

Financial and physical performance of UFSMTC has not been quite satisfactory, it is clear from the above table No. 7.6 that the fleet utilisation by the corporation were increasing, while occupancy ratio shows decreasing trend Its reason is unauthorised operations by the private operations on nationalised routes. The income per kilometer of UPSATC has also been on the increase from year to year. It increased from 295 pairs per Km. 1982-83 to 318 pairs in 1983-84 and 381 pairs in 1986-87. But this income per Km. earned by the corporation is less than another state's corporations. The progress of UPSATC has not been quite satisfactory from the point of kilometerage earned by buses and no. of travelled passengers. The position in fact, has been worse during 1984-85. Though bus-staff ratio is in decreasing trend yet there are no any deficiency in the expenditure of per item. The bus staff ratio was 10,58 in 1982-83 while it decrease to 8.25 in 1986-87. Ayainst its, the expenditure per Km. increased irom 352 pairs in 1982-83 to 376 pairs in 1982-83.

Hence, it is clear the prinomance of UPSNTC has not been impressive. It is beset with many complex internal as well as external problems, such as leakege in revenue from varied sources, inadequacy of available resources, problem of modernisation repairs and replacement of old buses, proper and effective management of various depats and work thous, effective checking of buses, puntuality of buses in operation etc. Its expenses are increasing wherea the revenues are not increasing wherea the revenues are not increasing in the

same proportion. The gap has not been bridged in concerted menner. The problem of arrangement of capital resources for purchase of new buses and replacement of old exist. . Concerted efforts, on various directions are needed to tackle its problems, and to bring about desired inprovement in its financial priformances. CONGLUDING OBSERVATIONS ALD SUGGESTIONS

The importance and need for public sector has been emphasisedtime and again by various authorities including our all Frise Ministers at various forms. The various industrial policy resolutions and five year plans adopted by our country have assigned a key role for the public sector and have reserved some core sectors for development, only under public sector.

The public sector in India has been devised as a tool to gain control over the commanding height of the economy, to promote critical development in terms of social gains to provide commercial surpluses to correct regional imbalances in the economy, to provide exployment opportunities to the vast labour forces and to obtablish a socialist society in the country.

The growth of public enterprises in India us well as in various states has been phenosenal since the commencement of five year Plans. State enterprises in U.P. consists of 53 Corporations registered under the companies Act and 8 public corporations setup under separate statutes. There were only 10 enterprises by the end of 31st Docember, 1967 and 17 by the end of 1972. Their number shurply rese to 53 by 1977 and further to 61 by 1907. Besides these, there are 24 subsidiary companies of those enterprises.

These state enterprises, like public enterprises in India are sainly functioning in the area of development and promotional activities, which are predominantly samufacturing and trading in nature. State enterprises are soully either old units being run by the Governments or extension of department at services being rendered.

These state enterprises, have been set-up mainly to provide infrastructural facilities in various sector like industries,

a riculture, handicrafts, handloom etc

- to manage the public utility system
- to safeguard and expand condopment opportunities and diversity the states projection potential in terms of value added,.
- to uplift and help the economically weaker section of the society and minorities,

The busic philosophy for setting up these state enterprises is to bring about a result- oriented, costbenefit approach to the developmental activities, accelerate growth in different sectors of the ecomony. Settling up of these numerous enterprises reveals the state Governments' desire and intentions brin, about rapid all-round growth of the state, with its major resources and use of institutional finance.

In the analysis sais in the preceding pages, an attempt has been made to direct some of the financial problems of U.P.State Shoot Transport Corporation. Though there are many problems attuabled with the corporation such as problems of personnel management, and industrial management but we have sainly taken up on a study financial management problems and have made an attempt to analyse therein datail.

This study comprises of seven chapters. Various conceptual aspects of financial managementhave been dealt with earlier and various functions, objectives of financial management have been discussed in detail. An attempt has been made to analyse the financial management of Public

enterprises. Development of Public enterprises in U.P.
States has been studied. A brief introduction of U.P.
State Boad Transport Corporation has also been given.
The resourch methodology i.a., selection of sample and collection of cata has also been briefely described. The data of study have been drawn adminy from secondary sources, which have been availed from the Head Office of U.P. State Boad Transport Corporation, lawknow, Sarvajanik Diyam Eureau Uttar Pradesh, Lucknow and other related agencies. The reports of comptroller and auditor denoral on public enterprises have also been helpful to get the desired information regarding this study.

The W.P.State Road Twansport Corporation has a unique place in the economy of Uttur Pradesh. It is one of the most important state level public enterprise. Hence, the scope of study has also been dealt with.

The necessary statistics for a period of 10 years from 1976 to 1987 have been collected from the annual reports issued by the U.P.State Road Transport Corporation.

We have dealt with growth of public enterprises in Uttar Fradesh. A brief study also has been made with the concept of Public sector particularly with reference to India. The economic growth of the state has been also studied. The growth of public enterprises during pre-independance and past independance period hat been studied. Prior to. independance, the role of public enterprises in the State was rather limited. The stree government evinced interest for encouraging the public enterprises only after independance This is clear from the fact that in 1950-51 there were only three state government industrial and commercial enterprises. 61 public enterprises have been established upto Dec. 1989, in the state, out of the 35 public enterprises were established in the period from 1972 to 1977, while 25 public enterprises were established in other period.

An analysis of employment position in these entorprises reveals that at the end of your 1972-73 there were about 1.11 lakhs esployees at the end of 1987-88. The total investment in 61 enterprises was Rs. 5,63,074 lakhs at the end of the 31st March, 1987.

An attempt has been sade to study the history of Hond development. The U.P. State Hond Transport Corporation was set-up on Tune 1st, 1972 as a statutory conjunction under Road Transport Act, 1950 - with a view to provide adequate transport facilities. At this end of first five years plan (1955-56) the total investment increased to Rs. WHG. 94 lakins with net profit Rs. 12.58 lakin, while this increased As. 225,81 Cr. upto 1987.

The growth of U.P.Skine hand Transport Corporation has been quite spectacular, judged from the point of number of routes and distances in to first decade of its existance (1372-82). The number of routes increased from 1111 in 1382 from 1372. The distance of coutes increased from about 1345 thousand Kms to about 288 thousand Kms in 1361. Today, U.P. State Road Transport Corporation is playing its first of buses on all important routes of the state. It had a first

of 7,151 buses, 152 trucks and 67 taxies as on 31st Dec.1987.

The growth of UPSUTO from the point of city bus service has not been satisfactory viewed from the total number of passengers travelled. The total number of passengers travelled by the city buses were 967.96 lakks in 1979-80. It increased by 592.11 lakks only in the year 1986-87. The growth of UPSUTO from the point of "malloyment has been satisfactory. The total employment provided by UPSUTO was 51802 employees at the end of 31st Dec. 1987.

We have studied the governing board and wanagement of UPSRIC briefly. In UPSRIC, a mixed form of functional and policy board operates. The board had been consisting of the Hon'ble Minister of Transport as a Chairman and Chief Secretary, Finance Secretary and Deputy Secretary Transport and Transport Commissioner as member. the overall control of the corporation has been vested in the board of directors constituted in accordance with the provision of Road Transport Corporation act 1950. In UPSRTC, two third members were oppointed by the state government and one third members were oppointed by the central government. The member tenure will be for one year from the date of assumption of office and they were entitled for reappointment. The board of directors has power to appoint bus drivers, conductors, clerks and servants. It hav also determine the powers and duties of various personnels. It may also remove, suspend or terminate the stuff as well as officers.

An effort has been made to analyse the long term and short term financial management in UPSATC. An attempt has has been made to study the meaning and importance of financial management. the following factors have been discussed with special reference to UPSETC :-

- (i) Trading on equity
- (ii) Capital gearing
- (iii) Cost of capital
- (iv) . Hayimum control
- (v) Cash flow ability
- (vi) Flexibility of the company
- (vii) Size of the company

The total capital invested in UPSATC has been increasing from Rs.69.27 cr. in 1975-76 to Rs.428.25 cr. in 1987-88. We found that the equity v se has been increasing from 217 \$ in 1975-76 to 36.3 % in 1987-88. The U.P. Government has placed at the disposal of the corporation Rs. 12 Cr. as a) equity capital which increased Rs. 118.70 cr. in 1987-88. Similarily, the chetral government contributed as. 3.00 cr. in 1975-76 as county capital. The internal resources of UPSRTC also increased. The total reserves amounted to Hs.25.19 Cr. in 1975-76 and which increase to Hs.199.6 Cr. at the end of year 1987. The UPSKYC has depended mainly upon the financial policy of government so far its long term capital resources are concerned. After studying and analysisin, the tong term financial manuscent, working canital management of UPSRTC has also been studied. The probitability of a business mainly depends upon how the working capital is

managed. Proper managuant of working capital may result in greater profitability. There are two concepts of working capital, vis., gross working capital and net working capital. The net working capital in UPSRIC has been increasing regularly The working capital was Rs. 983.49 lakh in 1977-78 which increased to Rs.3183.45 lakh at the end of 31st March 1986.

Ratio analysis has also undertaken to judge financial

performance of UPSKUT. Yhe ratio of Return On Investment, we found that the position of earning capital of UPSKUT is very dangers for the long and short term creditors. The recognised standard for the judging the quick or acid test ratio is that it is taken to be satisfactory if it is 1:1. In case of UPSKUT the liquidity position of corporation was satisfactory. Jimilwrlly, the current ratio of 2:1 indicates quite helpful in discolurging current liabilities without any difficulties. In case of UPSKUT we find the best possible liquidity estimation orevailed during 1977 to 1880-81.

The growth of working capital in UPSKTC has been measured by computing Multiple Correlation, between net working capital and sales services. A very high degree of possitive co-relation has been found in case of UPSK.C.

The financial performance of UPSETC has also been analysed under the following sub-heads:-

- (i) Cost analysis
- (ii) Capital analysis
- (iii) Revenue analysis
- (iv) Financial performance and
- (v) key perform ace ratios.

We have found that paid-up capital of the

corporation upto 1966-87 stood at Hs. 14-771,32 lukh. All the shares ere owned by at the and central government. Verious items of cost in UPSITC are continuously increasing. The total cost on personnel salway and wages assuming to Hs. 3626,93 laths in 1982-83, while it increased to Hs. 7791.77 laths in 1986-87. Smallwrily, the revenue of the corporation has also been increasing. Yet, it has been incurring losses due to increase far various costs. The income from all the sources were near about Hs. 31 crores on the 31st March 1987.

amounted to Mr. 7732 labbs as aguinst paid-up capital of Rs. 36982 labbs. upto 4986-87. Financial and physical performance of UPSRIC has not been quite satisfactory. Busstaff Ratio vas 10,78 in 1982-83 while it decereased to 8,25 in 1986-87. Similarily the occupancy ratio vas 74 in 1982-83 argainst 76 in 1986-87.

MAIN FINDINGS:

From the study of some of the problems related to the financial management of state enterprises in general and UPSRTO in puricular several important conclusions have been arrived at;

We find that has opened of manusement of HPSWTC requires persons having such qualities which combine the efficiency of private unnequent with the concern for the public interest. From the unilysis of the initial is of association of UPARTS and To the study of the structure of board, it has been observed that no specific qualifications have been laid down for the oppointment of the members of the board. The ratio of the part-time members is disproportionately higher and most of the part-time members are nominated in the board on the basis of offices held by them in Government Departments and not on the basis of any experience - in the transport field. It has been also observed that efficient Regional Managers are offered more empluments in private sector undertakings as compared to public sector. Hence, this has prevented the regular flow of best managerial talants to it. It has also been observed that within a brief time most of directors have not been able to work for the full-term. Such a floating situation has prevented them from benefiting the forgor tion by their knowledge. We find that the state Government retains wide power of control over IPSKIC and thus there is a truncated delegation of authority.

While the span of Vovt.control is wider been the need be, the control is neither adequate nor effective.

It is observed that higher inventory ratio is maintained by the UPSAUG in coaparison to other public enterprises. A high inventory ratio blocks the effective use of capital and reduces the argin of profit. One of the causes of high inventory holding in UPSAUG is the punchase of spares and accessories in a larger quantity than needed,

A sound financial management and control has remained at a relatively low level in state public enterprises, It is evident from the fact that there is no uniformity in financial practices and rules in all state enterprises. In UPSRIC, though there is a Finance Division, yet satisfactory arrangement for consultation with the finance is lacking. On many times, the sound advise of the Director Pinance has been ignored by the other executives of the corporation. resulting in excess purchase of spares and fuels and wasteful expenditure like other public enterprises in state, the budgetary control in UPANTO is not effective as the budget is viewed more as a tool of allocation of resources than a weapon of control. Generally, it so happens that the capital budget is received by the ministry at the time when general budget is presented. .Without any detail examination of the proposals the budget is included in the general budget for appropriation.

be introduced in a my state enterprises including UPSHTO.

It has been observed that the mudit rules have been modelled
on the rules of the central boyt, and there is ample scope
for signifying them.

A system of effective cost control is yet to

. The functionin, of UPSRTO shows a little evidence of financial discipline. Hence, an effective Government Control is essential over their finance. The present system of external muit is defective as it is a fault finding in nature and is sainly concerned with the certification of balance sheet and profit and loss accounts.

The lagislative control over the finance of state enterprises includin, UPSKYO is not effective as the annual reports submitted by them are simply laid on the table of Widhan Sabha and separate time for discussion on these reports is not allowed. The these annual reports have got only informative value, Morever, the annual reports are not sent in time to the Vidhan Mandal and there is no uniformity in the forms and contents of the reports of state enterprises.

It has also been observed that the problems before UPSARY are innumerable and complicated indeed. Its expenses are increasing whereas the revenues are not increasing in the same proportion. The gap has got to be bridged in the concerted manner.

We find that the problem of arrangement of capital resources for purchase of new buses and replacement of old one indeed appears to be quite insurmountable. However, the resourcesmust be obtained on the reasonable terms from various vailable sources. It is also seen that the corporation has paid a lot of amount against interest to central as well as state governments. An analysis of financial performance of UPSATC, reveals that the expected profitability of the corporation is very low and quite unsatisfactory. The debt-equity ratio is maintained at a low level with the result the management hesitates to take risk in raising loans. The limit of cash-credit arrangement with bank is also very low. It has been observed that the government loans are frequently converted into shares and concession is allowed in deferring repayment of loans and interest. It is done without much difficulty hence management of the corpor ition hardly brothers for adequate return on capital. Though the corporation has accumulated huge losses the trend is however towards gradual decline in losses. ultimately resulting in a measure profit of 2,52 crores in 1987-88.

indern economic activity requires speedy of men and materials. The development of adequate facilities is highly essential for the growth of economy. The economic and social progress of all the nations of the world collectively depends upon rand4 and efficient reliable transportion services by rail, road and affile. The road transport is a vital sector of the indian economy and its development is directly linked with the growth and development of road transport.

Though, the number of public enterprises have increased with total investment yet many of them are running on havesy losses. U.P.State koad Transport Corporation is also in the same category. There are many problems connected with the corporation, viz., industrial management problems, personnel management problems, financial management problems and others. But in view of foregoing findings and analysis the following suggestions are submitted to improve the financial management of UPCART.

- It is suggested that all the loans provided by central as well as state government should be converted into equity capital and step should be taken to curtful working expanses.
- A financial advisor be appointed to ensure that financial considerations are given their due weight before insurring expenditure.

The transport budget should be presented to the Legislative As early separately and separate days should be alloted for the discussions and Hon ble Minister in-charge of Transportation . should make a meneral statement. The Cornoration should be directed to submit its annual reports in time in an approved form stating therein detailed informations reserving cost.capacity. quality of services, quantity of buses comparative performances.future plans and past operations. Though the wide powers have been retained by the Government in respect of financial control over the corporation, yet these should not lead to undue interference and operational efficiency. An independent sudit by the Comptroller and Auditor General grould be invoked whenever the statutory audit point out grave irregularities. It is suggested that suitable assendment may be made in the Newbrundum and Articles of Association of UPGRTC. There should be experienced and qualified deubers for the Board of Directors. In any case, the ratio of part-time members should not exceed 50% of total strength of the Board. Not more than two part-time representatives. outside the government, be nominated. These nominations should be based on their experience

in the related field.

It should be succested that the state Government . should reduce its soan of control in internal .

management of UPSMIC rantin, it proper autonomy There is hardly any logic in reserving the power of sanctioning or manisational set-up, approval of rules of recruitment and promotions etc by the corporation.

financial control and management. The Chief of the finance should have some independence and in case of disa-respent with Regional Manager

It is suggested that the separate finance division should be created in the corporation for effective and other Chief-Executives, the matter should be referred to the Board of Directors for final decision. Model financial rules should be adopted by the division. The .mismanagement of stores and spares and other accessories should be examined by an expert co-mattane before signing the contract with the callaborations. Regular inspection of stocks can reduce the workshop expenditure substantially. The management of UPSATC should allocate more funds for welfare facilities of the employees. It should pay more attention towards prevention

of acciddent and safety. It will boost the high

morale of employees.

The total capital of UPSHTC has been continuously. increasin. . . ie proportion of internal resolves in total capital has not been more significant of loan taken by corporation from the various

during 1977-78 to 1981-82 and whereas proportion financial institutions increased during the same period. We also analysed and find the debt-equity ratio is almost 1:1 after 1979-80, while payable interest of U.P.Covernment was transferred to capital contribution from 1977-78 to 1981-82.

Therefore, it is suggested that a liberal debt policy should be allowed to be followed by the UPSHIC and debt-equity ratio should be maintained at 2:1. The limit of Cash-Credit arrangement should be raised. Defore making funds available to UPSRIC the government should be asked for the expected return on invested capital and management must give guaranttee to achieve the expected return. Though the sim of corporation is to provide the adequate and corfortable transport facilities to the people of the state and functioning on a no-profit-no-loss basis, yet it is necessary that the corporation should maintain necessary financial discipline.

Total loans and advances given to its staff drawn its huge resources. Total advances taken by the staff was Rs. 399.32 lakh in 1978-79. Although

1t decreased in 1979-80 to ms. 223.58 lakhs but it suggested that the effective steps shold-

be taken for refund of loans and advances taken by V.I.P. and the interest on the loans inear

about 9%) should be charged strictly. 12. UPSRTC is a service industry and its sorking capital requirements is lower as compareed to compercial enterprises. It gets working capital funds from government and other financial institutions,

Therefore, the cor oration intends to maintain a very low margin of safety. Hence, it is suggested that the corporation should maintain its optimum level of working capital to liquidate

its short-term obligations and they face problems of raising funds smoothly, The UPSATC does not present a satisfactory picture in financial areas. It has been incurring losses

13.

continuously, which indicates lack of managerial efficiency. Hence, it is suggested that management should take neces way action to control the leakage in reweape and turn out the evils and carelessness of Roadways employees.

The study of the workin, of the UPSHTC thus clearly demonstrate that isis not being managed efficiently. It may be evident from the analysis of the findings arrived at that

there are sary problems related to management and there is managerial incapabilities in hamiling the affeirs in an effective sanners such as - inadequary of available resources, problems of sodermisation repairs and replacements of old buses, proper and effective sanngement of various depots, workshop, effecting, checkin, of buses in operation etc. Hence, it is suggested that all necesseary stops should be taken by the unagement to tackel the problems of the corporation to bring desired improvement in its financial performance. Only then, it would be able to provide efficient, adousts, economical and properly co-ordinated system of road transport service to the people of the states.

Total Workships = 111

GLOSSARY OF TRANSFORT TERMS

This glossary is based on the glossary published by the Central Institute of Road Transport of the association of State Road Transport of India and gives the authorised definition of transport terms, concepts and method of their computation.

1. Average Number of Vehicles Held

The average number of vehicles held during any specified pried can be arrived or by adding the total number of vehicles held by the unit from day to day in the period and dividing by the total number of days in the period.

Average Number of vehicles in Workshop

The average number of vehicles in workshops during any specified pariod can be arrived at by adding number of vehicles in workshops from day to day during the period and by dividing the total vehicle days for such vehicles so arrived by the number of days in the period.

Average number of vehicles in workshops can be similarly worked out separately for each dategory or condition vista

- (i) Under routine inspection
- (ii) Off-road vehicles
- (iii) awaiting scraping.

Average Distance Travelled Per Passenger

The average distance travelled per passenger indicates the average length of the journey performed by passengers. This is calculated as under-

Total passenger per kilometers
Total number of passengers curried

- Average distance travelled per passenger

Average Earnings per passenger-

This index reflects the travel pattern of the '
passengers. It is the ratio of total earnings from passengers
to total number of passengers.

Cost of Operation-

The total working cost insurred in connection with the business of transportation of post-engers in termed as 'cost of operation' or operating cost. The operating cost includes all items of expenditure inou red in connection with operation of services including depreciation and interest on capital and appropriation from the net revenue but excluding income tax.

- The total cost of operations can be classified into-
- (A) Direct operational cost or Variables cost(B) Indirect cost or Fixed cost or Overheads.
- (h). All items of costs which have to be incurred for the actual running of the vehicle are known as direct operational cost or variable cost. In other words, the costs that can be assigned to the service and which would not be incurred if serservice is not operated or classified under this group. The direct operational cost is also termed as 'running cost' or 'Seculation gost' and includes the following items.
 - (i) Fuel (ii) Lubricating Oil (iii) auto stores (iv) tyres and tubes (v) Depot truffic and maintenance staff (vi) cost of ticket equi, mento and traffic stationary (vii) Depreciation on vehicles and (iiii) Passemer tax.
- (B). The indirect cost, fixed cost or overhead cost includes such items of expenditure which have to be incurred whether or not a vehile is actually run, and irrespective of the

volume of operation. Such cost are not affected by increase or decrease in the volume of operation over short period. Increase or decrease in kilometers operated is not followed by proportionate increase or decrease in overhead costs. Indirect costs consist of such expenses incurred on chalf of the operation as a whole and cannot be assigned to any particular service or part of the operations. The following items can be classified as indirect or fixed or overhead cost-viz-

(i) NV Tax (ii) Passenger tax (iii) Other tax and insurance (iv) depreciation on assets other than vehicles (v) Interest on capital/loans etc. (vi) General administration expenses including continpent expenses and (vii) All other expenses not included under direct operational contin.

6. . Cost per Kilometer-

As in case of revenue, the cost of operations in absolute does not by itself indicate the efficiency or otherwise of the service operated. A relative measure of costs has to be worked out to compare the cost of producing the service with rate of earnings. Cost per kilometers is one of such relative measures, which is computed by selecting effective kilometers as a unit of measurement.

The cost per kilometer is computed by dividing the totatal cost of oper-tions by the total elective kilometers.

The cost per kilometer can be worked out either in respect of each component of the cost separately.

7. Capital Receipts-

^ Capital receipts represent the money receives from the participating governments as contribution towards the capital investment in the undertaking for utilization for acquisition of permanent assets to run the business. Borrowed capital raised through issue of detenutes or through loans from banks and other financial institutions and utilised for acquisition of assets also constitute capital receipts. Similarly, amount financed from internal resources for acquisition of assets also constitutes a source of capital receipts.

8. Capital Expenditure-

Capital expenditure represents all expenditure incurred in the acquisition of permanent assets which are intended to be continuously used in the business of the undert-king for purpose of earning r-vorme, Thug, the expenditure incurred for acquiring neases such us land and buildings, plant, machinery and equipments, motor vehicles and similar assets by way-for permanent equipment for carrying on the business of transportation of pas.em.ers are classified as cantal expenditure.

Any amount spent on extension or improvement of the existing assets with the aim of increasing their revenue earning capacity is also classified as capital expenditure.

9. Capital Employed or Invester -

The cumulative expenditure on permanent assets at a point of time represent the total capital employed or capital invested in the organisation.

Mean capital employed is equal to-Capital employed at the beginning of the year + Capital employed at the cut of year

10. Gross Profit-

The excess of the total gross revenue over the revenue expenditure is the gross profit margin and the excess of the total gross revenue over the total cost of operation (including depreciation and interest) is the net profit margin. The net profit margin is usually arrived at before charging income tax.

11. Cross Revenue-

Total revenue derived from all the sources constitutes "gross revenue" or "total revenue".

12. Earning Per kilometers-

The earning per kilometer is the ratio of total earning the total effective kilimeters. Barning per kilometer is one of the useful ratio to indicate the earning potential of a route/depoch/division/organisation. The FPX is related to the carrying capacity of the buses fare structure and the earning the earning potential of route.

13. Earning per bus-

When a bus is selected as a unit of mersure, the resultant rate will be earnings per bus. Earning per bus can be expressed either in terms of number of buses on road. It is calculated as follows-

Total earning during the period Average number of buses on road or held during the period.

The aver go earning per bus per day can be arrived at by dividing the slove ratio by the number of days in the period.

14. Fleet Utilisation or vehicular Utilisation-

Fleet utilisation, also tormed as vehicular utilisation is the ratio of the number of vehicus on road to the floet beld by the unit. Floet utilisation is always expressed as percentage and it is a measure of the efficiency of the engineering department. It is/inficates how many of the total vehicles held or actually utilised for operations.

Fleet utilisation can also be calculated on the basis of the effective fleet that is to say the total fleet held minus vehicles held up for major repairs, scrapping etc.

15. Occupation Ratio or Occupa cy Ratio-

Occupation ratio is the p-roentage ratio of passenger kildmeters (seat kildmeters sold) to seat kildmeters offered. .

Accupation Ratio = Passen or Kilometers
| Seat Kilometers offered | 100

This retio is important since it throws light on the volume of tradic and indicates the extent the seets provided were occupied, and is of fundamental value at the time of revision of timings augmentation of trips and realignment of routes.

The accupation ratio is the most important statistical indicator pertaining to the adequacy or otherwise of the services offered to the public. A very low ratio may important the need for either raduction of tipe or or use of limiture while a very high ratio may implicate other overloading or non availability of mosts at intermediate points and the need to augment the vertices.

16. Operating Ratio-

The operating ratio is the percentage ratio of the total cost of operations or operating costs to the total traffic or operating revonue.

The operating ratio is arrived at as under-

Total traffic/operating feverue x 100 = % operating ratio.

The operating ratio is the most general measure of operational efficiency and an index of concends op ration of services. It is important to the man.general in judging in operations. The ratio when substracted from 100 percent shows the net operation merial available.

17. Profitability Ratios-

Profit margin can be measured in relation to the capital that is invested to earn it. The ratios that are usually employed to measure the profitability of the capital are-

- Percentage ratio of gross profit margin to the Carital employed (on assets)
- (ii) Percentage ratio of not profit margin to the capital employed (on assets)
- (iii) Percentage return on capital (the percentage rutio of net profit before intervat and toxos) the capital employed (on assets). This ratio slows the relationship between the size of profit and the capital employed.

Higher ratios, are indicative of better profitability of the capital invested.

18. Route Kilometers-

The actual distance in Alemeters between to turnihal points of a route as defined above in the route kilometers.

The total route kilometers operated by a depot/division.

endertaking is the sum total of the actual length or $\dim_{\mathcal{U}_{n}}$ in kilometers of all the routes in operation by $\operatorname{depot}/\operatorname{div}_{1\times 1,j}$ undertaking.

19. Staff Employed-

The total staff actually working (on rolls) in the various units (Depot/Division/other units) as on the last con a specified period will represent the total staff employed.

The stoff will include the permanent as well as temporary employees including daily wagers actually working on the specified date but will exclude the substitutes working analant leave/suspension vacancles.

The stiff employed can be bro-dly classified into three group viz (1) Traffic (ii) workshop and maintenance (iii) Administrative.

(i) Traffic-staff-

includes drivers, conductors, other truffic operational staff such as controllersAfTs and ATS, Ticket and traffic office staff at the depot and the divisional traffic office.

(ii) Workshop and Maintenance Staff-

Includes all workshop staff including supervisory staff at depot, divisional and central workshop but does not include staff employed on puropherial activities like tyre retroading, body building etc.

(iii) Administrative staff-

Includes all the staff other than that included in groups (1) and (11) above. All the staff working in the Central offices irrespective of the department in which they are working are grouped as administrative staff.

20 Vehicles Utilization-

* Kilometers done per vehicle on road per day is the vehicle utilisation. It is a measure of efficiency of both the engineering and the traffic department. It indicates how much the vehicles made available for operations are used.

Usually vehicle utilisation is expressed in relation to gross kilometers. It can also be expressed in terms of Average vehicles utilization is worked out as under-

Average gross/effective Kms. done per day Average no. of vehicles on road per day

and

Total gross/effective kms. during the period Total vehicles days for vehicles on road during period.
